Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D008
Waste Description: LEAD

Waste Code: D010
Waste Description: SELENIUM

Waste Code: D018
Waste Description: BENZENE

Waste Code: D026
Waste Description: CRESOL

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS

TACOMA CITY SIGN SHOP (Continued) **1000697013**

CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Name: TACOMA REDEVELOPMENT PROP
Address: THEA FOSS WATERWAY
City,State,Zip: TACOMA, WA 98402
Facility ID: 1263
Region: Southwest
Lat/Long: 47.244229080493 / -122.4332283700
Clean Up Siteid: 3677
Site Status: CC-Perf. Monitoring
Contaminant Name: Polycyclic Aromatic Hydrocarbons
Alternate Site Names: Thea Foss Waterway
Site Rank: 0 - NPL Site (Fed HRS Score)
Has Institutional Control:True
Past VCP: Not reported
Current VCP: Not reported
Ground Water: Confirmed Above Cleanup Levels
Surface Water: Confirmed Above Cleanup Levels
Soil: Confirmed Above Cleanup Levels
Sediment: Not reported
Air: Not reported
Bedrock: Not reported
Responsible Unit: Southwest

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that

AMERICAN PETROLEUM ENVIRONMENTAL SERVICES (Continued) **1010736935**

discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Click Here:

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Evaluation Date:	2009-06-18 00:00:00.0
Evaluation Responsible Agency:	State
Found Violation:	Yes
Evaluation Type Description:	COMPLIANCE EVALUATION INSPECTION ON-SITE
Evaluation Responsible Person Identifier:	WAJMC
Evaluation Responsible Sub-Organization:	SW
Actual Return to Compliance Date:	2009-09-22 00:00:00.0
Scheduled Compliance Date:	2009-09-22 00:00:00.0
Date of Request:	Not reported
Date Response Received:	Not reported
Request Agency:	Not reported
Former Citation:	Not reported

CSCSL:

Name:	RAINIER PLYWOOD CO
Address:	624 E 15TH ST
City,State,Zip:	TACOMA, WA 98421
Facility ID:	81457934
Region:	Southwest
Lat/Long:	47.25076 / -122.42438
Clean Up Siteid:	10604
Site Status:	Cleanup Started
Contaminant Name:	Benzene
Alternate Site Names:	RAINIER PLYWD DBA RAINIER RICHLITE,Rainier Plywood
Site Rank:	Not reported
Has Institutional Control:	Not reported
Past VCP:	Not reported
Current VCP:	Not reported
Ground Water:	Not reported
Surface Water:	Not reported
Soil:	Suspected
Sediment:	Not reported
Air:	Not reported
Bedrock:	Not reported
Responsible Unit:	Southwest

Detailed On-site Waste Treatment Methods and Efficiency:

Cas number:	000108952
Document control number:	1318217178932
Chemical name: PHENOL	
Classification:	TRI
Unit of measure:	Pounds
Stream 1 - waste stream code:	Gaseous (gases, vapors, airborne particulates)
Stream 1 - trtmt method - sequence 1:	Incineration--thermal destruction other than use as a fuel
Stream 1 - trtmt method - sequence 2:	Not reported
Stream 1 - trtmt method - sequence 3:	Not reported
Stream 1 - trtmt method - sequence 4:	Not reported

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
AIR EMISSIONS CLASSIFICATION UNKNOWN
US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

RAINIER RICHLITE CO (Continued) **1000891764**

transported off-site.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
AIR MAJOR
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TACOMA CITY CONVENTION CTR GARAGE (Continued) **1011266136**

Environmental Interest/Information System:
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Form Comm:	Farallon re-activated the WAD number to remove drums of DW soil and groundwater generated in late 2007. Ecology is currently reviewing a contained-in request for a portion of the soils generated in 2007 that contain low concentrations of PCE and/orTCE. Once the contained-in determination is issued Farallon will manage all waste soil and water per Ecology's requirements. The waste disposal activities will be the subject of the 2008 DW reporting year since no waste has been removed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/29/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/29/2020

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/15/2020

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TACOMA/PIERCE COUNTY:

LF TACOMA/PIERCE: Closed Landfill Survey
Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

Date of Government Version: 09/01/2002
Date Data Arrived at EDR: 03/24/2003

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

EDR Inquiry # 5773462.1	Contact: Adam Romey

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below (selected maps only*). The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

PO # TDLE - 5541800030-5.4.5.12

Project TDLE - 5541800030-5.4.5.12

* Environmental Data Resources, Inc. has been instructed by Parametrix, Inc. to print ONLY the Sanborn Maps for the years listed below:

1963 (6)
1950 (6)
1912 (6)
1896 (4)
1888 (2)

Total Maps: 24

Sanborn® Library search results

Certification #: B2C5-4CC5-A27B

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✔ Library of Congress
- ✔ University Publications of America
- ✔ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Parametrix, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

Item Description

Title
Marvin D. Boland Collection BOLAND-B16360

Description
This section of East 25th St. in 1927 contained several businesses located side-by-side. From L-R: Tacoma Biscuit & Candy Co. (601-605 E. 25th); Olympic Ice Cream Co. (615-617 E. 25th); Olympic Ice Co. (619-623 E. 25th) and the Carman Mfg. Co., a furniture and mattress factory, at 701-723 E. 25th. Several cars, including at least one delivery truck, are parked outside the buildings. G57.2-040; TPL-2405

Mr. Joe Carman
c/o Spencer Law Firm
1326 Tacoma Avenue South
Tacoma, Washington 98402

Re: **Remedial Investigation Workplan**

Spring Air Northwest
725 East 25th Street
Tacoma, Washington

Mr. Carman:

EcoCon, Inc. (ECI) appreciates the opportunity to submit this Remedial Investigation Workplan for the property located at 725 East 25th Street in Tacoma, Washington (the Property). It is our understanding that the Washington State Department of Ecology (Ecology) recently issued a letter titled "Request for Information on Status of VCP Project", dated April 14, 2015 (Attached). This letter specifically requests the following information:

- Cleanup Status Report;
- Any Reports Documenting the Cleanup; and,
- Plan and Schedule for Completing the Cleanup.

Per your request, ECI competed a review of all available records relating to environmental work completed the Property and is prepared to produce a Cleanup Status Report and provide any available environmental reports not already submitted to Ecology. ECI's review, as summarized in this proposal, also identified the first steps necessary to communicate a plan and schedule for completing the cleanup.

In order to evaluate cleanup alternatives, Ecology requires that the "Site" is fully defined. The Site is defined by Ecology as the full vertical and lateral extent of contamination resulting from a release of hazardous substances. In this instance, the impacts to soil and groundwater from a release of petroleum hydrocarbons associated with the former fueling station on the northwest corner of the Property. As described below, Ecology has determined that this Site is not currently defined.

Site Location and Description

The Property consist of a single tax parcel (Pierce County #2075270010), currently improved with a manufacturing building and parking lot in the upland edge of the industrial Tacoma Tideflats area. Land use in the vicinity includes rail yards, a transit station, train station, and industrial and commercial businesses.

Historical use of the Property, on the portion where the current 1891-vintage building exists, has included manufacturing (furniture and mattress), a warehouse company, and a heating and boiling company. The area of the Property currently utilized for parking was developed by at least 1896, and has included lumber/wood storage, part of a sawmill and engine shop, a fuel and service station, and a restaurant.

Previous Environmental Investigations

Previous research has uncovered the following recognized environmental conditions (RECs) associated with the Site: three underground storage tanks (USTs) associated with the gasoline service station in the northwest corner of the Site, a storage area for varnish and oil in the vicinity of the current parking garage, and a UST that fueled the building's boiler.

Heating Oil UST

Environmental investigative and remedial activities began in 1986, with the reporting of one UST on the Property, associated with the boiler at the manufacturing facility. This approximately 7,000-gallon diesel UST is located under the current building and was closed in place in 1989 by Don Golden Company. One soil sample was collected from the UST area and analyzed for TPH. The soil sample contained a reported TPH concentration of 53.2 mg/kg, below the Model Toxics Control Act (MTCA) Cleanup Level of 2,000 mg/kg.

A Level I Site Assessment was later conducted by Creative Environmental Technologies, Inc. (CETI). Three soil borings were advanced in the vicinity of the former boiler, which confirmed significant free-phase hydrocarbon contamination in two of the three borings.

In August 1998, CETI conducted a Level II site assessment to further investigate environmental concerns identified in the Level I assessment. Thirty three borings were drilled in the boiler UST area north of the building, one test pit adjacent to the factory building (the exact disposition is unknown), one temporary monitoring well, and three permanent monitoring wells were installed (MW3 through MW5). Selected soil samples were analyzed for DRO, ORO, chlorinated solvents, PCBs, total metals, volatile organic compounds (VOCs), and polycyclic aromatic hydrocarbons (PAHs). Visible free product was encountered in several borings (B1, B4, B5, B6, B10, B17, B19, and B22) and a lens of diesel/heating oil was identified between five and eight feet bgs. The concentration of DRO in B1, which was used as a temporary monitoring well, exceeded the MTCA Method A cleanup level at 41,500 µg/L. Additional analysis of the soil sample from B31 included EPH/VPH and PAH analysis, which confirmed diesel as the predominant hydrocarbon at the Site. B31 contained concentrations of DRO in excess of MTCA Method A cleanup levels, and cPAH concentrations in slight excess of the Method B cleanup levels for benzo[a]anthracene, chrysene, and benzo[a]pyrene.

The Site was entered into the Washington State Department of Ecology (Ecology) Voluntary Cleanup Program (VCP) in September 1998, with a request for opinion on a proposed remedial action. Ecology approved CETI's November 1998 Cleanup Action Plan (CAP), which utilized the remedial alternative of removing contaminated soil outside the building and using a pump and treat system inside the building,

with possible bioventing later on. Quarterly groundwater monitoring was approved for five years (monthly for the first six months).

Following the Level II site assessment, CETI excavated the diesel-contaminated soil from the parking lot and up to within several feet of the north and east walls of the building. A total of 2,804 tons of contaminated soil was transported offsite for disposal. Diesel-contaminated soil remained under the building, so an impermeable geomembrane was installed vertically between the contaminated soil in place near the building and the clean fill material. The pump and treat system outlined in the CAP was approved by Ecology and installed by CETI in 1999 to remove the remaining free-phase hydrocarbons from the Site. Six recovery wells were installed inside the building (RW1 through RW6) and two were installed outside, near the northeast corner of the building (RW7 and RW8). Approximately 100 gallons of free product were sequestered during the two years the pump and treat system was in operation. In April 2001, the system was shut off and the pumps were removed from recovery wells, due to the results of groundwater sampling and reduced amount of product recovery. Several years of groundwater monitoring was then conducted by Sound Environmental Strategies (SES), which effectively shows a stable groundwater plume which is laterally defined.

In September 2006, a prospective purchaser of the Property contracted a Phase I and II Environmental Site Assessment at the Site from Swift Creek Environmental (SCE). Piezometers were installed as part of the investigation to determine groundwater flow at the Site. SCE performed a limited subsurface investigation which included the collection of groundwater samples from existing monitoring wells (RW-2 and MW-4) on March 27, 2006, and groundwater and soil samples from recently installed temporary piezometers (MWA and MWB), boring B-3, and existing monitoring well MW-4. One soil sample was collected from B-3 (northwest of the former boiler), MWA, and MWB and analyzed for DRO, VOCs, semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), and Resource Conservation and Recovery Act (RCRA) metals, including arsenic, barium, cadmium, chromium, lead, mercury, silver, and selenium. Groundwater samples were collected and analyzed for DRO, VOCs, SVOCs, PCBs, and RCRA metals. SCE concluded metals concentrations were consistent with background levels in soil. No PCBs, SVOCs, or VOCs were detected in soil. The groundwater samples collected from MWA and MWB contained concentrations of DRO and ORO in excess of the MTCA Method A Cleanup Level.

Gasoline Service Station

As part of the Level I Site Assessment conducted by CETI in 1998, a geophysical survey was conducted by Apollo Geophysics in July 1998 in the area of the former service station. The geophysical survey identified three USTs: one 550-gallon, one 1,000-gallon, and one 2,000-gallon tank. The USTs were removed by Environmental Tank Services (ETS) under the direction of CETI in July 1998. Soil impacted with concentrations of diesel-, oil-, and gasoline- range organics (DRO, ORO, and GRO) below MTCA Method A cleanup levels was encountered in the fill material of the removed gas station USTs. Confirmation soil samples from the UST basin excavation indicated concentrations of all analytes below laboratory reporting limits (non-detect) and well below MTCA Method A cleanup levels.

In an effort to further characterize the release identified in the area of the former fueling station, Environmental Management Services (EMS) advanced four borings (B1 through B4) to twelve feet bgs in

the northwest corner of the Property. Soil and groundwater samples were collected and analyzed for benzene, toluene, ethylbenzene, xylenes (BTEX), GRO, DRO, and ORO. Selected samples were also analyzed for the presence of VOCs, PAHs, PCBs, and metals (arsenic, cadmium, chromium, lead, and mercury). GRO was detected at a concentration exceeding the MTCA Method A cleanup level in soil samples collected from boring B4. Groundwater collected from B4 also contained concentrations of DRO and ORO exceeding MTCA Method A cleanup levels. Groundwater collected from B1, B3, and B4 contained concentrations of lead in excess of the MTCA Method A Cleanup Level of 15 ug/L and the groundwater sample collected from B3 contained a concentrations of chromium exceeding the MTCA Method A cleanup level.

On June 15, 2007 Ecology provided an opinion on the completed remedial actions for the Site, which concluded that further characterization was necessary to adequately define the contamination associated with the former service station. Specifically:

- Petroleum hydrocarbon contamination in soil;
- Metals in soil;
- Petroleum hydrocarbons in groundwater;
- Volatile organic compounds in groundwater; and,
- Metals in groundwater.

Ecology suggested that groundwater monitoring wells should be installed in order to define the extent of this contamination. Ecology's opinion letter is attached to this proposal.

PROPOSED SCOPE OF WORK

Focused Subsurface Investigation

Included in this FSI will be the survey and identification of subsurface utilities, and the collection and analysis of soil and groundwater samples from multiple locations in the area of the former service station. ECI also proposes to collect groundwater samples from the existing well network originally installed to define the nature and extent of the DRO and ORO contamination. ECI will then compile the data acquired and complete a detailed report providing the FSI findings, opinions and recommendations.

Pre-Sampling Activities

- Public and Private utility location identification at the Site
- Preparation of Site-Specific Health and Safety Plan (HASP)

Limited Geophysical Survey

Prior to completing the sample collection portion of the project, ECI will complete a thorough non-invasive geophysical survey of the Site, using electromagnetic survey techniques. The intent of the limited geophysical survey is to locate and trace subsurface utilities and other buried equipment and "clear" each boring location.

Sample Collection

ECI will complete up to eight (8) borings using direct push sampling techniques as shown on the attached "Figure 3". Exact boring locations will be determined in the field by a qualified environmental professional based on geophysical survey data, utility locations and site observations. All drilling will be completed by a licensed driller as required in Washington Administrative Code (WAC) 173-160.

Soil will be field-screened utilizing olfactory techniques and physical observations such as soil staining and sheen presence prior to sample collection. Soil samples locations will be determined in the field by a qualified environmental professional. All soil samples will be collected in accordance with industry standard sampling techniques.

If groundwater is encountered, samples will be collected using industry standard techniques, including the use of low flow sampling equipment and disposable (single-use) polyethylene and silicon tubing.

Following collection, each discrete sample will be placed in new, laboratory provided containers and assigned unique sample identification numbers (e.g. B1-4'-022514). Volatile Organic Compounds (VOC) soil samples will be collected using the Washington State Department of Ecology (Ecology) -required Environmental Protection Agency (EPA) 5035 sampling collection method. Samples will then be placed into a container maintained at 4° Celsius until delivered to an on-site mobile laboratory.

Based on the results of the soil and groundwater samples, four of the eight soil borings will be completed as 1-inch diameter resource protection wells constructed of 5 feet of blank PVC casing, flush-threaded to approximately 10 feet of 0.010-inch slotted well screen. The depth of the slotted well screen section may vary and will be determined by a qualified environmental professional based on the observed soil groundwater interface.

ECI will collect groundwater samples from the newly installed wells in addition to those already installed on the Property. Based on the most recent groundwater sampling event conducted by SES, ECI understands there are 13 monitoring existing wells or recovery wells which can be accessed and sampled.

Groundwater samples will be collected in accordance with American Society of Testing and Materials (*ASTM) Guideline* D6771-02 "*Standard Practice for Low-Flow Purging and Sampling for Wells and Devices Used for Ground-Water Quality Investigations*".

ECI field staff will follow the procedures described below when collecting groundwater samples:

- The cap from the monitoring well will be removed and the groundwater level will be allowed to equilibrate to atmospheric pressure for a minimum of 20 minutes.
- The depth to groundwater in the monitoring well will be measured relative to the top of the well casing using an electronic water-level meter.
- Each monitoring well will be purged at a low-flow rate (100 to 300 milliliters per minute) using a peristaltic pump and dedicated polyethylene tubing. Temperature, and specific conductivity will be monitored during purging using a water quality meter to determine when these parameters stabilize.

Dissolved oxygen, oxidation-reduction potential, and pH will also be measured as they are important factors for the solubilization and mobilization of metals.

Regulatory Compliance

Regulatory compliance for this project is based on the WAC 173-340 –MTCA – Revised Code of Washington (RCW) Chapter 70.105D, implemented by Ecology. Pursuant to Chapter 70.105D RCW, Ecology has established cleanup standards and requirements for the cleanup actions (MTCA).

The rules establishing these standards and requirements were developed by Ecology in consultation with the Science Advisory Board (established under the Act) and with representatives from local government, citizen, environmental, and business groups. The rules were first published in February 1991, with amendments in January 1996, February 2001, and October 2007.

Contaminants of Concern & MTCA-A Cleanup Levels

Based on previous investigations and requirements outlined in Ecology's June 15, 2007 opinion letter, the contaminants of concern (COCs) at the Site are identified as: GRO; DRO; ORO; BTEX; select metals including arsenic, chromium, lead, and mercury; and VOCs.

The concentrations of these contaminants in the samples that will be collected for this FSI will be compared to the MTCA Method-A Soil CUL for Unrestricted Land Use and the Method-A Groundwater CUL, (MTCA WAC 173-340-900, Tables 740-1 (Soil) and 720-1 (Groundwater). These cleanup levels are presented below.

Table 1: Primary Contaminants of Concern

Method-A Cleanup Levels (MTCA-A) for Soil and Groundwater (MTCA Cleanup Regulation 173-340-900: Tables 720-1 and 740-1)		
Contaminant of Concern (COCs)	**Soil Cleanup Levels - mg/kg**	**Groundwater Cleanup Levels - µg/l**
Gasoline Range Organics (GRO)	100/30[1]	1,000/800[2]
Diesel Range Organics (DRO)	2,000	500
Oil Range Organics (ORO)	2,000	500
Benzene	0.03	5
Toluene	7	1,000
Ethylbenzene	6	700
Xylenes	9	1,000
Arsenic	20	5
Chromium VI	19	50
Chromium III	2,000	
Total Lead	250	15
Mercury	2	2
VOCs	Varies	Varies

[1] Gasoline Range Organics: Gasoline mixtures without benzene and the total of ethylbenzene, toluene and xylene are less than 1% of the gasoline mixture has a soil CUL = 100 mg/kg. All other gasoline mixtures have a soil CUL = 30 mg/kg. For groundwater, the CUL is 1,000 ug/l for gasoline mixtures without benzene and 800 ug/l for all other gasoline mixtures.

Sample Analysis

ECI expects up to 37 samples will be collected and analyzed during this primary investigation, 16 soil and 21 groundwater. Samples will be analyzed for site specific contaminants of concern outlined in Table 1. Should additional chemical analysis be warranted, ECI will provide recommendation and estimated costs for client authorization.

Analytical methodology will be consistent with Ecology and EPA criteria. All samples will be analyzed by a Washington State accredited laboratory.

Focused Subsurface Investigation Report

Following the receipt of sample analytical results ECI will prepare a focused subsurface investigation report, detailing site activities, sampling observations, and a summary of the laboratory analytical results.

Groundwater Monitoring Plan

Prior to the selection of an interim remedial action for the former gas station area, four consecutive quarters of groundwater samples will be collected from the 4 newly installed monitoring wells. Samples will be collected in accordance with American Society of Testing and Materials (*ASTM) Guideline* D6771-02 "*Standard Practice for Low-Flow Purging and Sampling for Wells and Devices Used for Ground-Water Quality Investigations*", along with the monitoring procedures described above.

Samples will be delivered to an Ecology accredited laboratory and analyzed for Site specific COCs discussed above. The proposed analytical methods are presented in the table below:

Contaminant of Concern	Analytical Method
Gasoline-range Organics (GRO)	NWTPH-Gx
Diesel-range Organics (DRO)	NWTHP-Dx
Oil-range Organics (ORO)	NWTPH-Dx
Benzene	EPA Test Method 8260C
Toluene	EPA Test Method 8260C
Ethylbenzene	EPA Test Method 8260C
Total Xylenes	EPA Test Method 8260C
Arsenic	EPA Test Method 7010 Series/6020/200.8
Chromium VI	SW846 7196A
Chromium III	EPA Test Method 7010 Series/6020/200.8
Total Lead	EPA Test Method 7010 Series/6020/200.8
Mercury	EPA Test Method 7010 Series/6020/200.8
VOCs	EPA Test Method 8260C

All chain-of-custody requirements will comply with industry standard operating procedures (SOPs) for sample handling. Sample documentation for custody purposes includes:

- Sample identification numbers,
- Sample labels,

- Custody seals,
- Chain-of-custody records,
- Field logbooks, and
- Analytical Records

The static depth to groundwater for the four monitoring wells will be measured each quarter prior to sampling to determine the groundwater elevation. The measured value will be subtracted from the elevation of the top of the monitoring well casings, which will be professionally surveyed after installation. Groundwater elevations will then be contoured and depicted on a figure with the relative flow direction and gradient.

ECI appreciates the opportunity to work with you on this project, should you have any questions please contact me directly at 805-680-4286.

Sincerely,

Brian A. Dixon
Vice President / Sr. Environmental Scientist

Re: Request for Information on Status of VCP Project for the following Site:

- **Site Name:** Spring Air Northwest
- **Site Address:** 725 E 25th St, Tacoma, WA 98421
- **Facility/Site No.:** 9111625
- **VCP Project No.:** SW0085

Dear Mr. Kemp:

The Department of Ecology (Ecology) appreciates your decision to clean up the Spring Air Northwest facility (Site) independently. However, our records indicate that you have not conducted any remedial actions during the past year at the Site. This letter requests information on the status of your cleanup and your continued interest in the Voluntary Cleanup Program (VCP).

Request for Information

Please submit the following information to Ecology within 30 days of the date of this letter:

1. Cleanup status report.

2. Any reports documenting the cleanup.

3. Plan and schedule for completing the cleanup.

Next Steps

Based on your response, Ecology will decide whether to continue providing you services under the VCP. We will notify you of our decision in writing. Please note that we will terminate the Agreement governing this Project if you do not respond to this request.

Contact Information

We are committed to working with you to accomplish the prompt and effective cleanup of the Site. If you have any questions about this request, please contact me at 360-407-7263.

Sincerely,

Thomas Middleton
VCP Site Manager
Toxics Cleanup Program, SWRO

- Address: 725 East 25th Street, Tacoma, Washington
- Facility/Site No.: 9111625
- VCP No.: SWO085

Dear Mr. Carman:

Thank you for submitting your site characterization report(s) for the Former Spring Air NW (Site) for review by the Washington State Department of Ecology (Ecology) under the Voluntary Cleanup Program (VCP). Ecology appreciates your initiative in pursuing this administrative option for cleaning up hazardous waste sites under the Model Toxics Control Act (MTCA), Chapter 70.105D RCW.

This letter constitutes an advisory opinion regarding whether the remedial action performed is sufficient to meet the specific substantive requirements of MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing and addressing the following release(s) at the Site:

- Petroleum Hydrocarbons in Soil;
- Volatile Organic Compounds in Soil (suspected);
- Polychlorinated biphenyls in Soil (suspected);
- Metals in Soil;
- Petroleum Hydrocarbons in Groundwater;
- Volatile Organic Compounds in Groundwater (suspected);
- Metals in Groundwater.

Ecology is providing this advisory opinion under the specific authority of RCW 70.105D.030(1)(i) and WAC 173-340-515(5).

This opinion does not resolve a person's liability to the state under MTCA or protect a person from contribution claims by third parties for matters addressed by the opinion. The state does not have the authority to settle with any person potentially liable under MTCA except in accordance with RCW 70.105D.040(4). The opinion is advisory only and not binding on Ecology.

Ecology's Toxics Cleanup Program has reviewed the following information regarding your remedial action(s):

1. May 29, 2007, Environmental Management Services, LLC. Subsurface Investigation, 725 East 25th Street, Tacoma, Washington.

2. May 2, 2007, Sound Environmental Strategies. Groundwater Monitoring Report, First Semester of 2007, Former Spring Air NW Facility.

3. September 25, 2006, Swift Creek Environmental, Inc. Phase I & II Environmental Site Assessment, Han Jo Ro, LLC Property a.k.a. Spring Air NW Facility or Chami Design Inc. Property, 725 East 25th Street, Tacoma Washington 98421.

4. November 9, 2006, Sound Environmental Strategies. Groundwater Monitoring Report, Fourth Quarter of 2006, Former Spring Air NW Facility.

The reports listed above will be kept in the Central Files of the Southwest Regional Office of Ecology (SWRO) for review by appointment only. Appointments can be made by calling the SWRO resource contact, Debbie Nelson, at (360) 407-6365.

The Site is defined by the extent of contamination caused by the following release(s):

- Petroleum Hydrocarbons in Soil
- Volatile Organic Compounds in Soil
- Polychlorinated biphenyls in Soil
- Metals in Soil
- Petroleum Hydrocarbons in Groundwater
- Volatile Organic Compounds in Groundwater
- Metals in Groundwater

The Site is more particularly described in Enclosure A to this letter, which includes a detailed Site diagram. The description of the Site is based solely on the information contained in the documents listed above.

The groundwater monitoring for the Spring Air NW facility is being conducted according to an Ecology approved groundwater monitoring plan (May 18, 2006 Opinion Letter). Since the previous Opinion Letter (May 18, 2006), Ecology received the above referenced four reports. Two of these reports provide groundwater monitoring results for the Spring Air NW facility (southern portion of the site) and the other two reports primarily reported on investigation results for the northwest portion of the northern parcel. This parcel previously contained a gasoline service station.

Based on a review of the reports listed above, **Ecology has determined that the site characterization and remedial action associated with the former gasoline service station area <u>is</u> sufficient to meet the specific substantive requirements contained in MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing the following potential release(s) in the northern portion of the Site:**

- Volatile Organic Compounds in Soil (except benzene, toluene, ethylbenzene, and total xylenes: BTEX)
- Polychlorinated biphenyls (PCBs) in Soil

However, based on a review of the reports listed above, **Ecology has determined that the site characterization remedial action associated with the former gasoline service station <u>is not</u> sufficient to meet the specific substantive requirements contained in MTCA and its implementing regulations, Chapter 70.105D RCW and Chapter 173-340 WAC, for characterizing the following potential release(s) at the northern portion of the Site:**

- Petroleum Hydrocarbons in Soil (including BTEX)
- Metals in Soil
- Petroleum Hydrocarbons in Groundwater
- Volatile Organic Compounds in Groundwater
- Metals in Groundwater

The extent of total petroleum hydrocarbons –gasoline range (TPH-G) soil contamination needs to be defined. Two samples from boring B4 (7.0 to 8.0 and 8.5 to 9.0 foot depth below ground surface, bgs) exceeded the total petroleum hydrocarbons –gasoline range (TPH-G) MTCA Method A Cleanup Level for Unrestricted Uses. Also, as stated in the previous Opinion Letter, because the site lies within the Tacoma Smelter Plume, there is the potential for arsenic and/or lead soil contamination. Exposed soil at the site should be sampled for arsenic and lead.

Additionally, groundwater monitoring wells should be installed in order to define the extent of contamination from total petroleum hydrocarbons – diesel range (TPH-D), total petroleum hydrocarbons – heavy oil range (TPH-O), chromium, arsenic, and lead. Grab samples of groundwater from borings SC-TL-MWA and SC-TL-MWB exceeded the MTCA Method A Cleanup Level for TPH-D and TPH-O and results from boring SC-TL-MWB exceeded the Cleanup Level for total chromium and arsenic. Results from B4 (west pump island area) were above MTCA Method A Cleanup Level for TPH-D and TPH-O. Results from boring B1, B3, and B4 exceeded the Cleanup Level for total lead and results from B3 slightly exceeded the Cleanup Level for total chromium.

The Former Spring Air NW site is located downgradient of the adjacent Tacoma Dome Station site. Therefore, it is possible that the observed groundwater contamination is migrating from the Tacoma Dome Station site. Because the constituents of concern for the Tacoma Dome Station site included volatile organic compounds (VOCs), **VOCs should also be included in the constituent list for the site.** When groundwater monitoring wells are installed, samples should be conducted on a quarterly basis. Groundwater flow direction and gradient should be determined for each sampling event.

Please provide Ecology with a site characterization and remediation work plan for these issues and areas of concern within three months of the date of this letter. The plan should include proposed groundwater monitoring well locations and monitoring depths, analytical constituents, and sampling schedule.

It is our understanding that the property will be redeveloped into a residential condominium complex. If the contaminated soil beneath the former Spring Air NW building will not be removed as part of the redevelopment, then an Environmental Covenant (EC) (formerly called a "Restrictive Covenant") should be filed on the property. The EC will prohibit withdrawal of groundwater from the property, and will require notification to Ecology of any future property sale or building renovation or demolition so that the contaminated soil beneath the building can be addressed. A boilerplate EC will soon be available from our website: http://www.ecy.wa.gov/programs/tcp/vcp/Vcpmain.htm. After Ecology has reviewed and approved the EC, it will need to be filed with Pierce County.

In accordance with WAC 173-340-840(5) and Ecology Toxics Cleanup Program Policy 840 (Data Submittal Requirements), data generated for Independent Remedial Actions shall be submitted in both a written and electronic format. Additional information regarding electronic format requirements, see the website http://www.ecy.wa.gov/eim. All laboratory analyses shall be performed by the State of Washington Certified Laboratory for each analytical method used.

Please note that this letter does not provide an opinion on the sufficiency of any other remedial actions conducted at the Site or whether further remedial action is necessary to characterize and address all contamination at the Site. To obtain such an opinion, you must

submit an independent remedial action report to Ecology upon completion of the cleanup action for the Site and request such an opinion under the VCP.

Please also note that this opinion is based solely on the information contained in the documents listed above. Therefore, if any of the information contained in those documents is materially false or misleading, then this opinion will automatically be rendered null and void.

The state, Ecology, and its officers and employees make no guarantees or assurances by providing this opinion, and no cause of action against the state, Ecology, its officers or employees may arise from any act or omission in providing this opinion.

Again, Ecology appreciates your initiative in conducting an independent remedial action and requesting technical consultation under the VCP. As the cleanup of the Site progresses, you may request additional consultative services under the VCP, including assistance in identifying applicable regulatory requirements and opinions regarding whether remedial actions proposed for or conducted at the Site meet those requirements.

If you have any questions regarding this opinion, please contact me at (360) 407-6247 or via e-mail at stee461@ecy.wa.gov.

Sincerely,

SS Teel

1.0 INTRODUCTION

EcoCon, Inc. (ECI) has prepared this Remedial Investigation (RI) Report for the former Texaco service station property at 704 Puyallup Avenue in Tacoma, Washington (the Property Site) (Figures 1 and 2; Appendix A). This report details field activities and observations, sampling activities, chemical analysis, conducted for the characterization of petroleum hydrocarbon contamination in the soil and groundwater at the Property This report also provides ECI's conclusions and recommendations.

As established in WAC 173-340-200, the "Site" is defined by the full lateral and vertical extent of contamination that has resulted from Underground Storage Tanks (UST) associated with a former Texaco service station on the Property. Based on the findings of environmental investigations discussed within this report, the Site has been defined as the nature and extent of the following contaminants in the soils and groundwater as defined by Ecology:

- Total petroleum hydrocarbons (TPH) in the diesel range (DRO),
- TPH in the oil range (ORO),
- TPH in the gasoline range (GRO),
- Benzene, toluene, ethylbenzene, xylenes (BTEX), and
- Select metals (arsenic, chromium III, chromium VI, mercury and lead)

1.1 Property Description/Location

The Property addressed at 704 Puyallup Avenue consists of a single 0.28 acre tax parcel (Pierce County Parcel #2074280010) (Figure 3, Appendix A), currently improved with a parking lot in the upland edge of the industrial Tacoma Tideflats area. The Property is zoned industrial and the land use in the vicinity includes rail yards, a transit station, train station, and industrial and commercial businesses. The Property boundaries are:

- Puyallup Avenue to the north,
- a parking lot on an adjacent parcel to the east,
- warehouse that was formerly Spring Air Mattress Company and currently used for loft type small manufacturing businesses to the south, and
- East G Street to the west.

The Property is currently utilized for parking and was developed by at least 1896. Former uses of the property have included lumber/wood storage, part of a sawmill and engine shop, a Texaco service station, and a restaurant. The warehouse on the adjacent property to the south was constructed in 1891 and has included manufacturing (furniture and mattress), a warehouse company, and a heating and boiling company.

The Property is relatively flat and is located at an elevation of approximately 15 feet. The area to the south of the Property rises steeply. The remainder of the area is relatively flat with a slight slope to the north and northeast.

1.2 Site Geology and Hydrogeology

1.2.1 Regional Geology

The Site is located in the Puget Lowland geologic region, an elongated topographic and structural depression filled with complex sequences of glacial and non-glacial sediments that overlie bedrock. Continental ice sheets up to 3,000 feet thick covered portions of the Puget Lowland several times during the Quaternary period. Retreating ice carved new landscapes, rechanneled rivers, drained or formed lakes, and deposited glacial drift including till and outwash (WA DNR, 2002).

1.2.2 Regional Hydrogeology

The primary aquifers in the Puget Sound region are typically overlain by relatively impermeable glacial till deposits that are present at or near the ground surface. Within these till deposits are localized areas or lenses of water-bearing sands and gravels that may result in a shallow, perched water table. Lateral and vertical migration of shallow groundwater may be impeded by the relatively impermeable nature of the till and by the sometimes-discontinuous nature of the perched water-bearing sands and gravel. Perched and discontinuous zones of shallow groundwater may be seasonally or perennially present, depending on site-specific conditions. Shallow groundwater flow directions fluctuate and tend to follow topographic gradient but are also affected by seasonal high-water tables and variable soil characteristics.

1.2.3 Site Geology

Property-specific geologic information was not available for review. According to the Washington State Department of Natural Resources online Geologic Portal the Site is underlain by glacial drift deposited during the Vashon Stade of the Upper Pleistocene Fraser Glaciation. This consists of till and outwash clay, silt, sand, gravel, cobbles, and boulders deposited by or originating from the continental glaciers. It can locally include peat, non-glacial sediments, modified land, and artificial fill. The underlying formation is The Natural Resource Conservation Service (NRCS) web Soil Survey does not list a soil type for this area. This is typical of urban and city area because much of the area has been cleared of the native soils. Older soil surveys for Pierce County have classified the soil as belonging to the Alderwood Series. These soils are considered gravelly sandy loam with slow infiltration rates.

Soils underlying the Property generally consist of silty sand with either gravel or cobble to approximately 16 feet below ground surface (bgs). The topographic elevation of the Subject Property is approximately 13 feet above mean sea level.

1.2.4 Site Hydrogeology

Perched and discontinuous zones of shallow groundwater may be seasonally or perennially present, depending on site-specific conditions. Shallow groundwater flow directions fluctuate and tend to follow topographic gradient but are also affected by seasonal high-water tables and variable soil characteristics Groundwater migration pathways may also follow underground conduits.

According to Washington State Department of Ecology well logs, and groundwater sampling events at the Property, shallow groundwater in the vicinity of the Subject Property is located at approximately 6 to 10 feet bgs. Based on groundwater elevations obtained from wells installed at the Site, the direction of groundwater flow is to the northwest toward the Thea Foss Waterway approximately 0.3 miles to the northwest. A groundwater contour map is presented in Figure 4.

1.3 Previous Site Investigations / Remedial Actions

1.3.1 Geophysical Survey and Underground Storage Tank Removal - 1998

In July 1998, as part of a Level I Site Assessment conducted by CETI in 1998 on the adjacent property to the south, Apollo Geophysics conducted a geophysical survey on the Property. The geophysical survey identified three USTs: one 550-gallon, one 1,000-gallon, and one 2,000-gallon tank. The USTs were removed by Environmental Tank Services (ETS) under the direction of CETI in July 1998. During the UST closure, approximately 43 tons of petroleum contaminated soil was excavated and transported off-site for disposal. After excavation, confirmation soil samples from the UST basin excavation indicated concentrations of all analytes below laboratory reporting limits and, therefore, below the Model Toxics Control Act (MTCA) Method A cleanup levels (CULs).

1.3.2 Subsurface Investigation – Environmental Management Services (EMS), 2006

In an effort to further characterize the release identified in the area of the former Texaco service station, Environmental Management Services (EMS) advanced four borings (B1 through B4) to twelve feet bgs on the Property. Soil and groundwater samples were collected and analyzed for benzene, toluene, ethylbenzene, and xylenes (BTEX), GRO, DRO, and ORO. Selected samples were also analyzed for the presence of Chlorinated Solvents (CVOCs), Polycyclic Aromatic Hydrocarbons (PAHs), Polychlorinated Biphenyls (PCBs), and metals (arsenic, cadmium, chromium, lead, and mercury).

CVOCs, PCBs and PAHs were not detected above the laboratory reporting limits in the soil and groundwater samples analyzed. GRO was detected at a concentration exceeding the MTCA Method A CUL in the soil samples collected from boring B4. Groundwater collected from B4 also contained concentrations of DRO and ORO exceeding MTCA Method A CUL. Groundwater collected from B1, B3, and B4 contained concentrations of lead in excess of the MTCA Method A CUL of 15 ug/L and the groundwater sample collected from B3 contained concentrations of chromium exceeding the MTCA Method A CUL. A summary of this data is presented in Appendix C.

1.3.3 Opinion Letter - Ecology, 2007

On June 15, 2007 Ecology provided an opinion on the completed remedial actions for the Site, which concluded that further characterization was necessary to adequately define the contamination associated with the former service station. Specifically:

- Petroleum hydrocarbon contamination in soil;
- Metals in soil;
- Petroleum hydrocarbons in groundwater;
- Volatile organic compounds in groundwater; and,
- Metals in groundwater.

Ecology suggested that groundwater monitoring wells should be installed in order to define the extent of this contamination.

2.0 SITE CHARACTERIZATION

2.1 Purpose

The purpose of the RI was to define the extent of soil and groundwater contamination associated with a former gasoline service station that was located on the Property and to provide sufficient information to develop remedial options for achieving closure at the Site.

2.2 Regulatory Compliance

Regulatory compliance for this project is based on the Model Toxics Control Act (Revised Code of Washington [RCW] Chapter 70.105D implemented by Ecology. Pursuant to RCW Chapter 70.105D, Ecology has established cleanup standards and requirements for the cleanup actions (Washington Administrative Code [WAC] 173-340).

The rules establishing these standards and requirements were developed by Ecology in consultation with a Science Advisory Board (established under the Act) and with representatives from local government, citizen, environmental, and business groups. The rules were first published in February 1991, with amendments in January 1996, February 2001, and October 2007.

2.3 Limited Geophysical Survey

Prior to subsurface work at the Site the "call before you dig service" (811) was called 48 hours in advance of site activities to identify public underground utilities. Additionally, Mountain View Locating Services of Bonney Lake, WA, completed a private subsurface utility sweep to locate any potential buried utilities.

2.4 Contaminants of Concern (COCs) and Cleanup Levels

Based on previous investigations and requirements outlined in Ecology's June 15, 2007 opinion letter, the contaminants of concern (COCs) at the Site are identified as: GRO; DRO; ORO; BTEX; and select metals including arsenic, chromium, lead, and mercury.

The concentrations of these contaminants in the samples that were collected for this RI were compared to the MTCA Method-A Soil CUL for Unrestricted Land Use and the Method-A Groundwater CUL, (WAC 173-340-900, Tables 740-1 [Soil] and 720-1 [Groundwater]. These cleanup levels are presented below.

Method-A Cleanup Levels (MTCA-A) for Soil and Groundwater (MTCA Cleanup Regulation 173-340-900: Tables 720-1 and 740-1)		
Contaminant of Concern (COCs)	**Soil Cleanup Levels - mg/kg**	**Groundwater Cleanup Levels - µg/l**
Gasoline Range Organics (GRO)	100/30[1]	1,000/800[2]
Diesel Range Organics (DRO)	2,000	500
Oil Range Organics (ORO)	2,000	500
Benzene	0.03	5
Toluene	7	1,000
Ethylbenzene	6	700
Xylenes	9	1,000
Arsenic	20	5
Chromium VI	19	50
Chromium III	2,000	
Total Lead	250	15
Mercury	2	2

2.5 Subsurface Investigation Activities

On October 25th, 2017, Standard Environmental Probe, of Tumwater, Washington, advanced eight (8) borings (GSMW1 through GSMW4, and B5 through B8) to a depth of 12 feet bgs, using direct push drilling techniques under the supervision of an ECI environmental professional. The borings were advanced in strategic locations, in the areas identified by previous environmental activities to have been in the vicinity of the former gasoline service station USTs (Figure 3, Appendix A).

Prior to sample collection, the soil was field-screened utilizing a handheld photoionization detector (PID), olfactory techniques and physical observations, such as soil staining and sheen presence. Field-screening techniques revealed the presence of hydrocarbons within borings GSMW2, GSMW3, GSMW4, and B5.

[1] Gasoline Range Organics: Gasoline mixtures without benzene and the total of ethylbenzene, toluene and xylene are less than 1% of the gasoline mixture has a soil CUL = 100 mg/kg. All other gasoline mixtures have a soil CUL = 30 mg/kg. For groundwater, the CUL is 1,000 ug/l for gasoline mixtures without benzene and 800 ug/l for all other gasoline mixtures.

Sixteen (16) soil samples were collected from borings GSMW1 through GSMW4 and B5 through B8. Two (2) soil samples from each boring were collected at depths between approximately five (5) feet bgs and the soil-groundwater interface, which was identified as approximately ten (10) feet bgs.

Relatively undisturbed soil samples were collected directly from the macro-core samplers extracted from the borings. Samples were transferred into new laboratory-provided analyte specific sample containers and assigned a unique sample ID; those collected for volatile organic compounds (VOCs) were collected using the EPA Method 5035 sampling procedures.

Groundwater was encountered at approximately ten (10) feet bgs on the Property. Groundwater monitoring wells were installed in four (4) of the borings (GSMW1 – GSMW4). The wells were constructed of 1-inch diameter PVC and screened from approximately fifteen (15) feet bgs to five (5) feet bgs. Boring logs and well construction details are provided in Appendix D. Upon installation of the monitoring wells, ECI developed the newly installed groundwater monitoring wells by pumping water from them until it was relatively clear.

2.6 Groundwater Sampling Activities

On November 1, 2017, ECI returned to the Property to collect groundwater samples from the four recently constructed groundwater monitoring wells (GSMW1 – GSMW4). Purging and sampling was conducted in accordance with American Society of Testing and Materials (*ASTM) Guideline* D6771-02 *"Standard Practice for Low-Flow Purging and Sampling for Wells and Devices Used for Ground-Water Quality Investigations"*.

ECI field staff followed the procedures described below when collecting groundwater samples:

- The cap from the monitoring well was removed and the groundwater level was allowed to equilibrate to atmospheric pressure for a minimum of 20 minutes.
- The depth to groundwater in the monitoring well was measured relative to the top of the well casing using an electronic water-level meter.
- Each monitoring well was purged at a low-flow rate (100 to 300 milliliters per minute) using a peristaltic pump and dedicated polyethylene tubing. Field parameters of temperature, pH, turbidity, dissolved oxygen and specific conductivity were monitored during purging using a water quality meter to determine when these parameters stabilized. Following stabilization of the field parameters, samples of the groundwater were obtained.

2.7 Sample Collection

During sample collection of the groundwater and soil, each discrete sample was placed in new, laboratory provided containers and assigned unique sample identification numbers (e.g. B1-5', GSMW1). Volatile Organic Compounds (VOC) soil samples were collected using the Washington State Department of Ecology

(Ecology) -required Environmental Protection Agency (EPA) 5035 sampling collection method. Samples were then placed into a container maintained at 4° Celsius until delivered to the laboratory.

2.8 Soil and Groundwater Conditions

2.8.1 Soil Conditions

The surface of the Site is paved with approximately three (3) to four (4) inches of asphalt. Below the asphalt pavement the soil conditions were fairly consistent consisting of loose brown coarse silty sand with gravel. Some cobbles were encountered during the drilling. It is assumed that the soil is fill material from when the Puyallup River delta and flood plain were filled in the early-1900s.

2.8.2 Groundwater Conditions

Groundwater levels for all four of the monitoring wells were measured on November 1, 2017. The depth to groundwater ranged from 6.13 feet to 9.18 feet below the top of the monitoring well casings. During drilling, groundwater at the Site was encountered at a depth of approximately 10 feet bgs and is most likely perched with an upward gradient.

Based on groundwater elevations obtained from the wells installed at the Site, the direction of groundwater flow is to the northwest toward the Thea Foss Waterway approximately 0.3 miles to the northwest with a gradient of 0.035 feet per foot (ft./ft.). A groundwater contour map is presented in Figure 4.

2.9 Analytical Results

2.9.1 Soil Analytical Results

Sixteen (16) soil samples were submitted to Friedman and Bruya of Seattle, Washington, and analyzed for the identified site specific COCs. The analytical results show that the soil sample collected from boring B5 at approximately five (5) feet bgs (B5-5'), exceeded the MTCA Method A CUL for GRO, ethylbenzene and xylenes at 1,500 mg/kg, 11 mg/kg, and 14 mg/kg respectively.

ORO was detected below the MTCA CUL in samples GSMW3-10 (820 mg/kg) and GSMW4-10 (1,100 mg/kg from a depth of 10 feet bgs and in sample B8-5 (460mg/kg) from a depth of 5 feet bgs. DRO was detected below the MTCA CULs in sample B5-5 (500 mg/kg) and in sample B8-5 (240 mg/kg). Both of these analytical results were flagged by the laboratory saying that *"The sample chromatographic pattern does not resemble the fuel standard used for quantitation"*. This may be a result of what was quantified as DRO being actually ORO. It may also represent that the diesel found is heavily weathered and the standard used was a fresh diesel.

Arsenic, lead and chromium were detected above the laboratory reporting limits in the samples analyzed. Both the arsenic and lead results were significantly below the MTCA Method A CULs. Chromium was

analyzed as total chromium and was reported as being above the MTCA Method A CUL of 19 mg/kg for combined chromium III and chromium IV in all samples except for sample B8-5.

Chromium is generally found in two valences, chromium +3 (trivalent chromium) and chromium +6 (hexavalent chromium). Of the two valences, hexavalent chromium is the most toxic and therefore when present, it has a lower clean up level. It also has a shorter residence time in the environment and relatively quickly reduces into trivalent chromium. The MTCA Method A tables (WAC 173-340-900: Tables 720-1 and 740-1) use hexavalent chromium for determining the cleanup levels. If the chromium can be show by analysis to be all trivalent chromium than the cleanup levels are raised to 2,000 mg/kg. Because hexavalent chromium has a short residence time in the environment and because it generally has a distinctive yellow-green color that was not observed in the samples, ECI is assuming that the chromium report is trivalent chromium. Using the assumption that the chromium is trivalent chromium, the reported values in the samples analyzed are significantly below the MTCA CUL.

A summary of the laboratory analytical results is provided in Table 1 in Appendix B. The laboratory analytical datasheets are presented in Appendix F.

2.9.2 Groundwater Analytical Results

Four (4) groundwater samples were submitted to Friedman and Bruya of Seattle, Washington and analyzed for the identified site specific COCs. The analytical results indicate that the groundwater samples collected from GSMW1 – GSMW4 exceeded the MTCA Method A CUL for total arsenic and samples from GSMW1 and GSMW2 exceeded the MTCA Method A CUL for total lead. The sample from well G5MW2 also contained total chromium at 56 µg/l which is slightly above the MTCA Method A CUL of 50 µg/l.

Because there was silt in the samples collected and that metals can be present in the silt, the groundwater samples from wells GSMW1 and GSMW2 were analyzed for dissolved lead. The analytical results for dissolved lead indicated that dissolved lead was below the laboratory method reporting limits.

Although total arsenic is above the MTCA Method A CUL in all four (4) groundwater samples, the analytical results for dissolved lead indicate that dissolved arsenic may also be below the laboratory method reporting limits as well. For the total chromium result in the sample from well GSMW2, it is assumed that the total chromium is a result of sediment in the sample. As discussed above with the soil results, it is assumed that the chromium found in the sample from GSMW2 is trivalent chromium in which case the MTCA CUL is 100 µg/L.

For the remaining COCs, the groundwater samples contained concentrations either below the laboratory method reporting limits or below their respective MTCA Method A CULs. A summary of the laboratory analytical results is provided in Table 2 in Appendix B. The laboratory analytical datasheets are presented in Appendix F.

2.10 Extent of Contamination

2.10.1 Soil Contamination

Based on the analytical results of the samples collected and analyzed in 2006 and the samples collected and analyzed during this RI, it is believed that the extent of soil contaminated with gasoline and its related constituents has been defined except for in one area of the Site. The soil contamination appears to be located in the area of borings B4 and B5. This is the area of the former USTs and one of the former dispenser islands at the Site. The limits of the contamination are defined by borings B1, B6, B7, B8, and well GSMW2.

The soil samples from well GSMW1 did not reveal petroleum contamination above the MTCA CULs and defines the potential southernmost boundary of the contamination. However, the limit of contamination is more likely closer to boring B4 than it is well GSMW1. The extent of contamination to the west has not been defined and is potentially off-site beneath the City of Tacoma right-of-way containing the sidewalk. Figure 5 in Appendix A shows the estimated extent of contamination.

Because there does not appear to be a correlation of the concentrations of the metals observed at the Site and the concentration of hydrocarbons and because the concentrations of metals observed are fairly consistent Site-wide, it is believed that the metals observed at the Site are a result of materials used to fill the entire area. The metals observed at the Site are a result of background concentrations and are not related to the petroleum releases at the Site.

2.10.2 Groundwater Contamination

During the Subsurface Investigation conducted in 2006 groundwater grab samples were collected from borings B1 through B4. With the exception of boring B4, petroleum contamination was not detected in the analyzed groundwater grab samples. The sample from boring B4 contained DRO and ORO above the respective MTCA Method A CULs.

Monitoring wells installed during this RI near the perimeter of the Property and sampled once have not shown contamination petroleum products. Therefore, it is believed that the DRO and ORO contaminated groundwater observed in boring B4 is an isolated occurrence related to the "pit water" collected in the former UST excavation. However, monitoring wells have not been installed east of the Site in the City of Tacoma right-of-way containing the sidewalk. Also, additional quarterly groundwater sampling will be needed to confirm that the groundwater near the perimeter of the Site remains unaffected.

As mentioned above when discussing the extent of soil contamination, it is believed that the arsenic and chromium contamination observed in the groundwater samples are background concentrations resulting from the materials used to fill the area near the site. Figure 6 in Appendix A presents the groundwater analytical results.

3.0 CONCEPTUAL SITE MODEL

Ecology requires that an RI provide information:

> *"...to determine the impact or potential impact of the hazardous substance from the facility on natural resources and ecological receptors, including any information needed to conduct a terrestrial ecological evaluation, under WAC 173-340-7492 or 173-340-7493, or to establish an exclusion under WAC 173-340-7491."* (WAC173-340-350(7)(c)(iii)(F)

To determine an impact or potential impact a Conceptual Site Model (CSM) is developed. The CSM summarizes the potentially complete exposure pathways by which receptors may be exposed to contaminants at the Site under current or anticipated future conditions. A complete pathway from the contaminant source to a receptor is necessary in order for contaminant exposure to occur. A discussion of physical setting, potential contaminant sources, the potential receptors, and the potential exposure pathways are presented in the following sections. Figure 7 in Appendix A presents a graphical representation of the CSM.

3.1 Physical Setting

The Property is currently utilized for parking and was developed by at least 1896. Former uses of the property have included lumber/wood storage, part of a sawmill and engine shop, a Texaco service station, and a restaurant. The warehouse on the adjacent property to the south was constructed in 1891 and has included manufacturing (furniture and mattress), a warehouse company, and a heating and boiling company. The Property is zoned industrial and the land use in the vicinity includes rail yards, a transit station, train station, and industrial and commercial businesses.

Shallow groundwater is present at the Site within approximately 8 to 10 feet of the ground surface and is anticipated to flow to the northeast.

3.2 Contaminant Sources

Based on the information gathered in previous investigations on the Property and during this RI, it is believed that the petroleum contamination found on the Property is a result from the past use of the Property as a Texaco service station. It appears that the petroleum was released from underground storage tanks and piping associated with the station. It also appears that metals observed in samples from the Site are a result materials used for regional filling of the area in the early 1900s.

3.3 Potential Receptors and Exposure Pathways

Potential receptors are those individuals and natural resources that may be exposed to contaminants under the current and reasonable likely future land and water use scenarios. Natural resource receptors include land-based plants and animals, as well as water-based plants and animals, wetlands, or sediments.

Based on the location of the Site, Natural resources are not considered as receptors for this Site Potential human receptors include the following: residents, occupational workers, construction workers and excavation workers.

The following human exposure pathways to contaminants in soil and sediment could be complete based on our understanding of current and future land use, water quality, and the magnitude and extent of contamination at the Site:

- Exposure to contaminants in soil (0 to 15 feet bgs) via incidental ingestion, dermal contact and inhalation of fugitive dust (occupational receptors and construction/excavation workers); and
- Potential Exposure to contaminants in soil via volatilization to outdoor air (occupational receptors).

The following exposure pathway to contaminants in groundwater is potentially complete:

- Exposure to groundwater via direct contact in excavations.

The following exposure pathway to contaminants in groundwater is currently incomplete; however, it is possible that this pathway could become complete in the future:

- Potential Exposure to contaminants in soil via vapor intrusion to indoor air (residential and occupational receptors)

3.4 Terrestrial Ecological Evaluation

As required by WAC 173-340-7492, ECI has completed a Terrestrial Ecological Evaluation (TEE). The Site is located in an urban area and there is there is less than 1½ acres of contiguous undeveloped land on or within 500 feet of any area of the Site. In addition, the metals found at the Site appear to exceed natural background levels. Based on this, it has been determined that the Site qualifies for an exclusion from further terrestrial ecological evaluation. A copy of the TEE form and documentation form are attached in Appendix E.

4.0 SUMMARY AND CONCLUSIONS

ECI has completed a remedial investigation at the former Texaco service Station located at 704 Puyallup Avenue in Tacoma, Washington. This RI relied on previous work conducted at the site between 1998 and 2007 as well as an investigation conducted in October 2017 and November 2017. The October and November 2017 investigations were to determine the lateral and vertical extent of petroleum contamination previously identified on the Property. The contamination consisted of gasoline and diesel related petroleum hydrocarbons that appeared to be released from a former UST system on the Property.

On October 25· 2017, ECI advanced eight borings on the Property and installed four groundwater monitoring wells. Sixteen soil samples were collected, from the eight borings, to assess the potential

environmental impacts due to the presence of the former gasoline service station on the Property. The analytical results showed that the soil sample collected from one boring (boring B5) at approximately five (5) feet bgs exceeded the MTCA Method A CUL for GRO, ethylbenzene and xylenes. The results also showed that DRO and ORO were either not present above the laboratory reporting limits or were not above the MTCA Method A CULs.

Arsenic, lead and chromium were detected above the laboratory reporting limits in the samples analyzed. However, both the arsenic and lead results were significantly below the MTCA Method A CULs. Chromium was detected above the MTCA Method A CUL for total chromium. However, it is believed that the chromium found is trivalent chromium and therefore the concentrations found are significantly below the MTCA Method A CUL for trivalent chromium.

Because the metal concentrations found did not appear to have a correlation with the petroleum concentrations and appeared to be consistent throughout the Site, it is believed that the metals are a result of materials used to fill the entire area. The metals observed at the Site are a result of background concentrations and are not related to the petroleum releases at the Site.

On November 1, 2017, collected groundwater samples from the four monitoring wells installed at the Property. The groundwater samples were collected to evaluate the groundwater quality beneath the Site.

The analytical results indicated that GRO, DRO, and ORO were not present above the laboratory reporting limits or were not present above the respective MTCA Method A CULs in the samples collected. The analytical results revealed that the groundwater samples collected exceeded the MTCA Method A CUL for total arsenic and two of the samples exceeded the MTCA Method A CUL for total lead. One sample also contained total chromium slightly above the MTCA Method A CUL.

Because there was silt in the samples collected two of the groundwater samples were analyzed for dissolved lead. The analytical results for dissolved lead indicated that dissolved lead was below the laboratory method reporting limits. Based on these results it is believed that the metals found in the groundwater samples are a result of silt and are not dissolved in the groundwater.

Based on the results of this RI, it appears that the contamination on this site is limited to the soil and is located near the former USTs. The extent of the contamination has been defined except to the west in the City of Tacoma right-of-way containing the sidewalk.

5.0 DATA GAPS AND RECOMMENDATIONS

Based on the information developed to date in this RI there appear to be four data gaps that need to be filled. The data gaps are:

- Determination of the extent of contaminated soils to the west in the City of Tacoma right-of-way containing the sidewalk,
- Determining if there is groundwater contamination in the City of Tacoma right-of-way containing the sidewalk,
- More closely defining the edge of contamination between boring B4 and well GSMW1, and
- Providing four (4) consecutive quarters of groundwater monitoring per Ecology requirements.

In order to fill the data gaps ECI recommends that:

- Additional soil borings be installed and sampled in the City of Tacoma right-of-way,
- If permitted, a groundwater monitoring well be installed in the City of Tacoma right-of-way,
- An additional soil boring be installed between boring B4 and well GSMW1, and
- Quarterly groundwater monitoring be conducted at the Site.

Notes: Well tag ID BJP 637. The soil from the 13 feet to 16 feet core was unrecoverable due to the liquefied contents emptying out when retrieving the core.

Appendix E – Terrestrial Ecological Evaluation Forms

Appendix E
Terrestrial Ecological Evaluation Forms

eci Environmental Services
Providing Practical Environmental Compliance Solutions
Offices in: Anchorage | Tacoma | Portland

Voluntary Cleanup Program

Washington State Department of Ecology
Toxics Cleanup Program

TERRESTRIAL ECOLOGICAL EVALUATION FORM

Under the Model Toxics Control Act (MTCA), a terrestrial ecological evaluation is necessary if hazardous substances are released into the soils at a Site. In the event of such a release, you must take one of the following three actions as part of your investigation and cleanup of the Site:

1. Document an exclusion from further evaluation using the criteria in WAC 173-340-7491.
2. Conduct a simplified evaluation as set forth in WAC 173-340-7492.
3. Conduct a site-specific evaluation as set forth in WAC 173-340-7493.

When requesting a written opinion under the Voluntary Cleanup Program (VCP), you must complete this form and submit it to the Department of Ecology (Ecology). The form documents the type and results of your evaluation.

Completion of this form is not sufficient to document your evaluation. You still need to document your analysis and the basis for your conclusion in your cleanup plan or report.

If you have questions about how to conduct a terrestrial ecological evaluation, please contact the Ecology site manager assigned to your Site. For additional guidance, please refer to www.ecy.wa.gov/programs/tcp/policies/terrestrial/TEEHome.htm.

Step 1: IDENTIFY HAZARDOUS WASTE SITE	
Please identify below the hazardous waste site for which you are documenting an evaluation.	
Facility/Site Name: Former Texaco Service Station	
Facility/Site Address: 704 Puyallup Avenue	
Facility/Site No:	VCP Project No.:

Step 2: IDENTIFY EVALUATOR			
Please identify below the person who conducted the evaluation and their contact information.			
Name: David Polivka			Title: Senior Hydrogeologist
Organization: ECI, Inc.			
Mailing address: P.O. 153			
City: Fox Island		State: WA	Zip code: 98333
Phone: 360-349-0851	Fax: 253-369-6228	E-mail: david @eci.us	

Step 3: DOCUMENT EVALUATION TYPE AND RESULTS

A. Exclusion from further evaluation.

1. Does the Site qualify for an exclusion from further evaluation?

☒ Yes *If you answered **"YES,"** then answer **Question 2**.*

☐ No or Unknown *If you answered **"NO" or "UKNOWN,"** then skip to **Step 3B** of this form.*

2. What is the basis for the exclusion? *Check all that apply. Then skip to **Step 4** of this form.*

Point of Compliance: WAC 173-340-7491(1)(a)

☐ All soil contamination is, or will be,* at least 15 feet below the surface.

☐ All soil contamination is, or will be,* at least 6 feet below the surface (or alternative depth if approved by Ecology), and institutional controls are used to manage remaining contamination.

Barriers to Exposure: WAC 173-340-7491(1)(b)

☐ All contaminated soil, is or will be,* covered by physical barriers (such as buildings or paved roads) that prevent exposure to plants and wildlife, and institutional controls are used to manage remaining contamination.

Undeveloped Land: WAC 173-340-7491(1)(c)

☐ There is less than 0.25 acres of contiguous# undeveloped± land on or within 500 feet of any area of the Site and any of the following chemicals is present: chlorinated dioxins or furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, heptachlor epoxide, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, or pentachlorobenzene.

☒ For sites not containing any of the chemicals mentioned above, there is less than 1.5 acres of contiguous# undeveloped± land on or within 500 feet of any area of the Site.

Background Concentrations: WAC 173-340-7491(1)(d)

☒ Concentrations of hazardous substances in soil do not exceed natural background levels as described in WAC 173-340-200 and 173-340-709.

* An exclusion based on future land use must have a completion date for future development that is acceptable to Ecology.

± "Undeveloped land" is land that is not covered by building, roads, paved areas, or other barriers that would prevent wildlife from feeding on plants, earthworms, insects, or other food in or on the soil.

"Contiguous" undeveloped land is an area of undeveloped land that is not divided into smaller areas of highways, extensive paving, or similar structures that are likely to reduce the potential use of the overall area by wildlife.

B. Simplified evaluation.

1. Does the Site qualify for a simplified evaluation?

☐ Yes *If you answered **"YES,"** then answer **Question 2** below.*

☐ No or Unknown *If you answered **"NO"** or **"UNKNOWN,"** then skip to **Step 3C** of this form.*

2. Did you conduct a simplified evaluation?

☐ Yes *If you answered **"YES,"** then answer **Question 3** below.*

☐ No *If you answered **"NO,"** then skip to **Step 3C** of this form.*

3. Was further evaluation necessary?

☐ Yes *If you answered **"YES,"** then answer **Question 4** below.*

☐ No *If you answered **"NO,"** then answer **Question 5** below.*

4. If further evaluation was necessary, what did you do?

☐ Used the concentrations listed in Table 749-2 as cleanup levels. *If so, then skip to **Step 4** of this form.*

☐ Conducted a site-specific evaluation. *If so, then skip to **Step 3C** of this form.*

5. If no further evaluation was necessary, what was the reason? *Check all that apply. Then skip to **Step 4** of this form.*

Exposure Analysis: WAC 173-340-7492(2)(a)

☐ Area of soil contamination at the Site is not more than 350 square feet.

☐ Current or planned land use makes wildlife exposure unlikely. Used Table 749-1.

Pathway Analysis: WAC 173-340-7492(2)(b)

☐ No potential exposure pathways from soil contamination to ecological receptors.

Contaminant Analysis: WAC 173-340-7492(2)(c)

☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations that exceed the values listed in Table 749-2.

☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations that exceed the values listed in Table 749-2, and institutional controls are used to manage remaining contamination.

☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 15 feet at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays.

☐ No contaminant listed in Table 749-2 is, or will be, present in the upper 6 feet (or alternative depth if approved by Ecology) at concentrations likely to be toxic or have the potential to bioaccumulate as determined using Ecology-approved bioassays, and institutional controls are used to manage remaining contamination.

C. Site-specific evaluation. A site-specific evaluation process consists of two parts: (1) formulating the problem, and (2) selecting the methods for addressing the identified problem. Both steps require consultation with and approval by Ecology. *See* WAC 173-340-7493(1)(c).

1. Was there a problem? *See* WAC 173-340-7493(2).

☐ Yes *If you answered **"YES,"** then answer **Question 2** below.*

☐ No *If you answered **"NO,"** then identify the reason here and then skip to **Question 5** below:*

- ☐ No issues were identified during the problem formulation step.
- ☐ While issues were identified, those issues were addressed by the cleanup actions for protecting human health.

2. What did you do to resolve the problem? *See* WAC 173-340-7493(3).

☐ Used the concentrations listed in Table 749-3 as cleanup levels. *If so, then skip to **Question 5** below.*

☐ Used one or more of the methods listed in WAC 173-340-7493(3) to evaluate and address the identified problem. *If so, then answer **Questions 3 and 4** below.*

3. If you conducted further site-specific evaluations, what methods did you use? *Check all that apply. See* WAC 173-340-7493(3).

☐ Literature surveys.

☐ Soil bioassays.

☐ Wildlife exposure model.

☐ Biomarkers.

☐ Site-specific field studies.

☐ Weight of evidence.

☐ Other methods approved by Ecology. If so, please specify:

4. What was the result of those evaluations?

☐ Confirmed there was no problem.

☐ Confirmed there was a problem and established site-specific cleanup levels.

5. Have you already obtained Ecology's approval of both your problem formulation and problem resolution steps?

☐ Yes If so, please identify the Ecology staff who approved those steps:

☐ No

Step 4: SUBMITTAL

Please mail your completed form to the Ecology site manager assigned to your Site. If a site manager has not yet been assigned, please mail your completed form to the Ecology regional office for the County in which your Site is located.

David Polivka, Project Manager
EcoCon, Inc.
15 S. Oregon Ave, Suite 110
Tacoma, WA 98409

Dear Mr Polivka:

Included are the results from the testing of material submitted on October 26, 2017 from the 0267-07-02, F&BI 710416 project. There are 39 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 26, 2017 by Friedman & Bruya, Inc. from the EcoCon 0267-07-02, F&BI 710416 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	EcoCon
710416 -01	GSMW1-5
710416 -02	GSMW1-10
710416 -03	GSMW2-5
710416 -04	GSMW2-10
710416 -05	GSMW3-5
710416 -06	GSMW3-10
710416 -07	GSMW4-5
710416 -08	GSMW4-10
710416 -09	B5-5
710416 -10	B5-10
710416 -11	B6-5
710416 -12	B6-10
710416 -13	B7-5
710416 -14	B7-10
710416 -15	B8-5
710416 -16	B8-10

A 6020A internal standard failed the acceptance criteria for several samples due to matrix interferences. The data were flagged accordingly. The samples were diluted and reanalyzed.

All other quality control requirements were acceptable.

Chromium	mg/kg (ppm)	50	112	80-120
Lead	mg/kg (ppm)	50	106	80-120
Mercury	mg/kg (ppm)	5	91	80-120

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

David Polivka, Project Manager
EcoCon, Inc.
15 S. Oregon Ave, Suite 110
Tacoma, WA 98409

Dear Mr Polivka:

Included are the results from the testing of material submitted on November 2, 2017 from the 0267-07-02, F&BI 711049 project. There are 19 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on November 2, 2017 by Friedman & Bruya, Inc. from the EcoCon 0267-07-02, F&BI 711049 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	EcoCon
711049 -01	GSMW1
711049 -02	GSMW2
711049 -03	GSMW3
711049 -04	GSMW4

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

VOCs	Volatile Organic Compounds

EXECUTIVE SUMMARY

Parametrix conducted a Phase I Environmental Site Assessment (ESA) for the Tacoma Dome Link Extension (TDLE) project in conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard Practice E 1527-13 (2013) on the subject property identified as Tacoma Dome (TD) properties TD 4461, TD 4476, and TD 4505. Any exceptions to, or deletions from, the Standard Practice are described in Section 1.3 of this report.

The subject property is located on Pierce County Tax Lots 2075240013, 2075240011, and 2075220021 and is currently occupied by a number of commercial businesses and a passenger rail station. The subject property encompasses an area of approximately 1.6 acres and is zoned for mixed use. The subject property consists of a 54,916-square-foot building.

The first known development on the subject property was in the 1880s with isolated residences. By 1912, the freight house that still stands on the property was constructed. The subject property remained the same until a structure was added to on the east end by 1957. No significant changes were made to the subject property between 1957 and the present. However, a fire in 1992 destroyed the eastern portion of the building and was reconstructed. Surrounding land use has remained commercial and industrial. The rail station construction on the west end occurred in 2016.

No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property during site reconnaissance. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance.

This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the subject property except for the following:

Recognized Environmental Conditions

The subject property is listed in both the Confirmed and Suspected Cleanup Site List (CSCSL) and CSCSL No Further Action (NFA) database. Contamination, likely originating from the former Olympic Ice and Machine Company, resulted in soil and groundwater impacts at the subject property. Diesel and oil-range hydrocarbons, polycyclic aromatic hydrocarbons (PAHs), and metals have been detected in soil and groundwater. Cleanup levels were exceeded for carcinogenic PAHs (cPAHs) and oil-range hydrocarbons in soil. Diesel and arsenic exceeded cleanup levels in groundwater. The site received a conditional NFA in 2003 with the implementation of a restrictive covenant that dictates groundwater and land use at the site. The presence of residual soil and groundwater contamination at the subject property represents a controlled REC (CREC).

Data Gaps

An on-site reconnaissance and interview were not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-13. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

1. INTRODUCTION

Parametrix was retained by Sound Transit to conduct a Phase I Environmental Site Assessment (ESA) on the site located at 2501 East D Street and 602 E 25th Street in Tacoma, Washington (herein referred to as the subject property; see Figure 1), as part of the Tacoma Dome Light Rail Extension (TDLE) project. The subject property includes Pierce County parcels 2075240013, 2075240011, and 2075220021 (TDLE parcel IDs TD 4461, TD 4476, and TD 4506, respectively). The subject property, known as Freighthouse Square, is a former train station currently housing commercial properties. The Phase I ESA was conducted to support environmental due diligence related to potential acquisition of the property associated with the TDLE project.

The subject property encompasses approximately 1.6 acres and includes a single structure (a former railway station) that houses a number of commercial businesses as well as the Tacoma Dome Station for the Amtrak Sounder rail line. The structure was constructed in 1909 and is 54,916 square feet in size. The boundaries of the subject property are shown in Figure 2.

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The Phase I ESA consisted of two distinct tasks: (1) a review of documents and of oral information (if available) and (2) a site examination. Conclusions and recommendations in this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with ASTM Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study. The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and, as such, constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined by 42 United States Code (USC) §9601 (35)(B).

The purpose of this Phase I ESA is to identify recognized environmental conditions (RECs) on or near the subject property. The term Recognized Environmental Conditions is defined in ASTM Standard E1527-13 as:

> "…the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any *release* to the *environment*; (2) under conditions indicative of a *release* to the environment; or (3) under conditions that pose a threat of a future *release* to the environment. *De minimis conditions* are not *recognized environmental conditions*."

In accordance with ASTM Standard E1527-13, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

DRAFT: For internal discussion only. Not reviewed or approved on behalf of any party.

An HREC is defined as:

> "…*a past release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

A CREC is defined as:

> "…*a recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those areas to which it had access on the subject property.

Phase I ESA methodology included viewing accessible areas of the subject property on foot. No visual reconnaissance was possible inside the buildings on the subject property. Unless otherwise stated, no exceptions to the guidelines presented in ASTM E1527-13 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site but were not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff
- Contacts and discussions with regulatory agencies and others
- Review of available hazardous substance or solid waste lists
- Opinions and judgments of Parametrix based on the information available

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

The following sections summarize the location, characteristics, and physical setting of the subject property.

2.1 Location

The subject property is located at 2501 East D Street and 602 E 25th Street in Tacoma, Washington. It is a 1.6 acre property bounded by East 25th Street and the Burlington Northern Santa Fe (BNSF) railroad tracks to the north and south, respectively, and by East D Street and East G Street to the west and east, respectively. According to the Pierce County Assessment Office, Time in Space LLC is the current owner of the subject property. The subject property includes Pierce County parcels 2075240013, 2075240011, and 2075220021 (TDLE parcel IDs TD 4461, TD 4476, and TD 4506, respectively). The site location is shown on Figure 1. The boundaries of the subject property and project construction footprint are shown on Figure 2.

2.2 Site and Vicinity Characteristics

The subject property includes a former railroad warehouse and office (54,916 square feet, built in 1909). The building currently houses a number of commercial businesses, including shops and restaurants as well as a station for the Amtrak Sounder rail line.

The vicinity of the subject property is developed for industrial and commercial uses. Properties in the direct vicinity include Tacoma Dome Station parking garages to the north, BNSF tracks to the south, Sluggo Brewing and HJB Marine to the south across the railroad tracks, and a parking lot to the west (Figure 2).

2.3 Physical Setting

The subject property is at an elevation of approximately 55 feet above mean sea level. The topography of the site gently slopes northeasterly towards the Puyallup River and Puyallup basin (USGS 2020). Soils in the area of the subject property are mapped as Alderwood gravelly sandy loam by the U.S. Department of Agriculture (USDA 1955). These are described as moderately well drained. Made land is mapped just north of the Puyallup Avenue, near the subject property. The made land is dredged material that was deposited artificially over marshy tideflats for grading.

The surface geology of the subject property is mapped as Quaternary Vashon recessional outwash ice contact deposits and Quaternary pre-Fraser age coarse-grained deposits. These are described as sand and gravel to silty sand and gravel with some clay portions. These deposits generally have a high porosity and permeability.

The site is underlain by artificial fill. Groundwater at the site is found at a depth of approximately 15 to 20 feet below ground surface. The groundwater flow direction below the subject property is primarily to the north (Shannon & Wilson 2015).

The nearest surface water body is the Thea Foss Waterway located 1,700 feet northwest of the subject property. The Puyallup River is located 3,800 feet northeast of the subject property.

2.4 Current Use of the Property

The subject property currently houses a number of commercial businesses, including shops and restaurants, as well as the Tacoma Dome station for the Amtrak Sounder rail line. Access to commercial businesses and the rail station is from the north side of the building, and the rail tracks lie along the south side of the building. Zoning for all three parcels of the subject property is listed as Downtown Mixed Use (DMU).

2.5 Descriptions of Improvements on the Subject Property

Based on Pierce County property assessment records, the subject property includes 1.6 acres with a single structure originally constructed in 1909, and it is 54,916 square feet in size. An addition was constructed on the east side of the structure in 1956. The passenger rail station was constructed in the east end of the structure in 2016. The interior of the building is currently divided into a number of commercial spaces. The exterior of the building is finished with sidewalks and other hardscaping. Local records indicate that electricity, gas, water, and sanitary sewer are provided by local utilities.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. Based on information from King County records and the interview with the site manager, environmental liens do not appear to exist against the subject property. No evidence of environmental liens was identified during the Phase I ESA process.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: 1) a review of regulatory databases to find sites, including and close to the subject property, listed by federal and State of Washington agencies and 2) a compilation of historical uses of the subject property and site vicinity properties to determine whether past operations pose an environmental risk to the subject property.

Information for agency database review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR Radius Map Report (EDR report) is a summary of state and federal database searches for sites of possible environmental concern and is included in Appendix B. Historical information is based on review of historical Sanborn Fire Insurance Maps (Appendix C) and aerial photographs (Appendix D).

The information review enabled Parametrix personnel to characterize the types of activities performed at the site and identify data gaps prior to the site examination, and it facilitated recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing Tacoma-Pierce County Health Department personnel, by making observations during the site examination or by additional detailed investigation of available records.

It should be noted that the information supplied by EDR is reported as Parametrix received it. EDR, in turn, reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from database records maintained by the U.S. Environmental Protection Agency (EPA) and Ecology. The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR report (Appendix B). Only standard and key additional databases are listed below. Parametrix reviewed the information in the EDR report to screen properties in the vicinity of the subject property for sites with potential to impact the subject property. The screening process involved reviewing the types of listings, types of contaminants, proximity and position relative to the subject property, topography, and groundwater gradient. Listings for sites found in the standard environmental records sources that could not be screened to verify potential impacts to the subject property were further evaluated by file reviews (see Section 4).

3.1.1 Review of Washington State Department of Ecology Databases

The following subsections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-13 search radii from the following databases. Additional information regarding these sites was reviewed on Ecology's Integrated Site Information System website to supplement data gaps in the EDR report. Relevant database listings from Ecology include the following:

- Underground Storage Tank (UST) List
- Leaking Underground Storage Tank (LUST) List

- Confirmed and Suspected Cleanup Site List (CSCSL)
- Confirmed and Suspected Cleanup Site List – No Further Action (CSCSL-NFA)
- SPILLS
- Voluntary Cleanup Program (VCP)
- Independent Cleanup Report (ICR)
- Landfill and/or Solid Waste Disposal Site Lists
- Brownfields

3.1.1.1 Underground Storage Tank List

The Ecology UST List identifies registered USTs, which are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data were obtained from Ecology's UST Site/Tank Report database.

Information contained in the EDR report indicates that the subject property is not listed as a UST site. Nineteen additional UST sites were identified within 0.25 mile of the subject property. Of those nineteen, twelve are in close proximity (0.125 mile) to the subject property:

- F&E Investments site (401 E 25th Street) is located approximately 100 feet north of the subject property. The site is reported to have had one tank that was removed in February 2020.
- Gary W Johnson site (323 E 26th Street) is located approximately 200 feet south of the subject property. The site is reported to have had one tank that was removed in February 2020.
- Spring Air NW site (725 E 25th Street) is located approximately 250 feet east of the subject property. The site is reported to have had one tank that was removed. This site is discussed in more detail in Sections 3.1.1.2 and 3.1.1.3.
- Don Engle Distributing site (2601 East F Street) is located approximately 340 feet south of the subject property. This site is reported to have had two tanks that were removed.
- Western Beer Distributors Inc site (712 E 26th Street) is approximately 360 feet southeast of the subject property. This site is reported to have one tank that was removed. This site is discussed in more detail in Section 3.1.1.3.
- Manna Pro Corp site (518 Puyallup Ave) is located approximately 370 feet north of the subject property. This site is reported to have three tanks that are in the process of closure. This site is discussed in more detail in Section 3.1.1.3.
- Discovery site (502 Puyallup Ave) is located approximate 370 feet north of the subject property. This site is reported to have one tank that is in the process of being closed.
- Salvation Army ARC site (409 Puyallup Ave) is located approximately 450 feet north of the subject property. The site is reported to have had one tank that was removed and closed in 2015.
- Clevinger Truck Service site (423 Puyallup Ave) is located approximately 500 feet north of the subject property. This site is reported to have eight tanks that were removed and closed. This site is discussed in more detail in Section 3.1.1.3.

- Frontier Transportation site (217 E 25th Ave) is located approximately 560 feet west of the subject property. The site is reported to have had two tanks that were removed.
- Gonzales Motors site (301 Puyallup Ave) is located approximately 570 feet northwest of the subject property. This site is reported to have three tanks that were removed. This site is discussed in more detail in Section 3.1.1.3.
- Pacific Charter School site (2300 East E Street) is located approximately 580 feet north of the subject property. This site is reported have had one tank that was removed and closed. This site is discussed in more detail in Section 3.1.1.3.

Unless otherwise noted, the mere presence of a UST near a site does not, in itself, constitute a REC. Where available, other information was reviewed regarding the presence of a UST, including the age of the facility, proximity to the subject property, and known releases or spills. UST sites that have had known releases are discussed in Sections 3.1.1.2 and 3.1.1.3.

3.1.1.2 Leaking Underground Storage Tank List

The LUST Incident Report contains an inventory of reported leaking UST incidents. The data were obtained from Ecology's LUST Database List. The subject property is not listed as a LUST site.

Thirty-two LUST sites were identified within 0.5 mile of the subject property. Eight of these sites are located within 0.25 mile of the subject property:

- Spring Air NW site (725 E 25th Street) is located approximately 250 feet east of the subject property. The site is reported to have petroleum and polychlorinated biphenyls (PCBs) in soil below cleanup levels and petroleum in groundwater above cleanup levels. Cleanup has been initiated at this site. This site is discussed in more detail in Section 3.1.1.3.
- Western Beer Distributors Inc site (712 E 26th Street) is approximately 360 feet southeast of the subject property. This site is reported to have pesticides (remediated) and petroleum (above cleanup levels) in soil. The site was given an NFA determination for the LUST in 1996. Based on the location, regulatory status, and lack of groundwater impact, this site does not represent a REC for the subject property.
- Manna Pro Corp site (518 Puyallup Ave) is located approximately 370 feet north of the subject property. This site is reported to have petroleum in soil which was remediated. This site was given an NFA determination for the LUST in 2001. Based on the location, regulatory status, and lack of groundwater impact, this site does not represent a REC for the subject property.
- Clevinger Truck Service site (423 Puyallup Ave) is located approximately 500 feet north of the subject property. This site is reported to have confirmed metals, solvents, and gasoline in soil and suspected in groundwater. Cleanup has been initiated at this site. This site is discussed in more detail in Section 3.1.1.3.
- Gonzales Motors site (301 Puyallup Ave) is located approximately 570 feet northwest of the subject property. This site is reported to have had benzene, lead, and gasoline in soil. Soil at the site was remediated and the site received an NFA for the LUST in 2012. Based on the location, regulatory status, and lack of groundwater impact, this site does not represent a REC for the subject property.

- Pacific Charter School site (2300 East E Street) is located approximately 580 feet north of the subject property. This site is reported to have had benzene and gasoline in soil. Soil at the site was remediated and the site received an NFA for the LUST in 2019. Based on the location, regulatory status, and lack of groundwater impact, this site does not represent a REC for the subject property.
- Mendez Property site (910 Puyallup Ave) is located approximately 960 feet northeast of the subject property. The site is reported to have gasoline in soil and groundwater and cleanup has been started. This site is discussed in more detail in Section 3.1.1.3.
- Holland Quality Cleaners site (102 S 24th Street) is located approximately 1,300 feet west of the subject property. The site is reported to have benzene, gasoline, and lead in soil. Cleanup has been initiated at the site. Based on the distance from the site and lack of groundwater contamination, this site does not represent a REC for the subject property.

3.1.1.3 Confirmed and Suspected Contaminated Sites List

The state hazardous waste sites records are the states' equivalent to the Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS). These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (the state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data were obtained from Ecology's CSCSL.

The subject property is identified as a CSCSL site. The Freighthouse Square, Amtrak Relocation site (Cleanup Site ID 14416) is reported to have petroleum and polycyclic aromatic hydrocarbons (PAHs) in soil and arsenic in groundwater confirmed above cleanup levels. Cleanup has been initiated at the site. The site is further discussed in Section 4.1.

Ninety CSCSL sites were identified within one mile of the subject property. Of the 90 sites, 46 are located within 0.5 mile of the subject property and five are located within 0.125 mile of the subject property:

- Spring Air NW site (725 E 25th Street) is located approximately 250 feet east of the subject property. The site is reported to have petroleum and PCBs in soil below cleanup levels and petroleum in groundwater above cleanup levels. Cleanup has been initiated at this site. Based on the location and understood direction of groundwater flow (to the north), this site does not represent a REC for the subject property.
- Former Texaco Service Station site (704 Puyallup Ave) is located approximately 350 northeast of the subject property. The site is reported to have petroleum and metals in soil and groundwater. Cleanup has been initiated at this site. Based on the location and understood direction of groundwater flow (to the north), this site does not represent a REC for the subject property.
- Stone Property Transit site (E 25th and East C Street) is located approximately 410 feet west of the subject property. This site is reported to have arsenic and other metals, petroleum, and PAHs in soil and is suspected to have metals, petroleum, PAHs in groundwater. The site is reported to have started cleanup. Based on understood local groundwater flow direction, the downgradient location, and distance from the subject property, this site does not represent a REC for the subject property.
- Clevinger Truck Service site (423 Puyallup Ave) is located approximately 500 feet north of the subject property. This site is reported to have confirmed metals, solvents, and gasoline in soil

and suspected in groundwater. Cleanup has been initiated at this site. Based on understood local groundwater flow direction, the downgradient location, and distance from the subject property, this site does not represent a REC for the subject property.

- South Sound Radiator site (509 Puyallup Ave) is located approximately 510 feet north of the subject property. The site is reported to have confirmed petroleum and non-halogenated organics in soil and the same contaminants suspected in groundwater. The site is currently awaiting cleanup. Based on understood local groundwater flow direction, the downgradient location, and distance from the subject property, this site does not represent a REC for the subject property.

A subset of the CSCSL is the CSCSL NFA. The database contains information about sites previously on the CSCSL that have received an NFA determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when clean-up activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

The subject property (Freighthouse Square, Cleanup Site ID 719) is listed as a CSCSL NFA site and was granted an NFA in 2003. This is discussed further in the File Review in Section 4.1. Eight other CSCSL NFA sites are reported within approximately 0.125 mile of the subject property. Based on distance from the subject property, continued cleanup efforts, and NFA listing, none of the identified sites appear to represent RECs for the subject property, unless specifically noted otherwise in another section.

3.1.1.4 SPILLS Database

This database provides a comprehensive list of reported spills. The subject property is listed as the location of two incidents in the SPILLS database. Based on information provided, neither incident represents a REC for the subject property.

3.1.1.5 Voluntary Cleanup Program

This database provides a listing of sites that have entered either the VCP or its predecessor, the Independent Remedial Action Program. The subject property is not listed as a VCP site.

Twenty-four VCP sites are reported within approximately 0.5 mile of the subject property. Six of these sites are located within 0.125 mile of the subject property. All six sites are discussed in previous sections.

3.1.1.6 Independent Cleanup Report

These are remedial action reports Ecology has received from either the owner or operator of the site. These actions have been conducted without department oversight or approval and are not under an order or decree.

The subject property is not listed as an ICR site. Eighteen ICR sites are reported within approximately 0.5 mile of the subject property. Of the eighteen sites, two are located within 0.125 mile of the subject property. Both sites are discussed in previous sections.

3.1.1.7 Solid Waste Facilities/Landfill

The Solid Waste Facilities/Landfill records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data were obtained from Ecology's Solid Waste Facilities Handbook.

The subject property is not listed as a Solid Waste Facilities/Landfill site. Five Solid Waste Facilities/Landfill sites were reported within 0.5 mile of the subject property. Two of the five sites are located within 0.125 mile of the subject property:

- The Caraustar Tacoma Paperboard site (808 E 26th Street) is located approximately 700 feet southeast of the subject property. The site is reported to be a non-regulated recycler. Based on the facilities function as a recycler, the site is not considered a REC for the subject property.
- The City of Tacoma – Dock Street Eductor Decant Facility site (201 Puyallup Ave) is located approximately 760 feet northwest of the subject property. This is a permitted facility for the storage and processing of waste from city storm drains and catch basins. Based on the in-place controls and lack of a documented release, this site does not represent a REC for the subject property.

3.1.1.8 Brownfields List

The Brownfields List is a database of sites that Ecology considers brownfields or that have received financial or technical assistance for cleanup. A brownfield is "a real property where expansion or redevelopment is complicated by actual or perceived environmental contamination." The subject property is not listed as a State Brownfields site. Two State Brownfields site were reported within 0.5 mile of the subject property:

- American Plating (2220 East D Street) is located approximately 1,050 feet north of the subject property. The listing indicates this site is on several additional databases and has an NFA status from Ecology dating to 2015. Based on the distance relative to the subject property and the reported status, this site is not considered a REC for the subject property.
- Tacoma Redevelopment Property (1933 Dock Street) is located approximately 1,980 feet northwest of the subject property. This property was partially remediated by excavation, redeveloped, and institutional controls were placed on the property in 2007 related to the contamination remaining in place. Based on the proximity to the subject property and listings, this site is not considered a REC to the subject property.

3.1.2 EPA Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following subsections summarize the most relevant information obtained from the EDR report regarding sites identified within the ASTM E1527-13 search radii from the following databases:

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) database
- Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Act (RCRA)

- Resource Conservation and Recovery Act Information (RCRAInfo) List
- Emergency Response Notification System (ERNS) List
- U.S. Brownfields List

3.1.2.1 NPL List

The NPL identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. Information contained in the EDR report indicates that the subject property is not listed as an NPL site. No NPL sites are listed within one mile of the subject property; however, there is one NPL site which impacts the vicinity of the subject property:

- The Asarco Tacoma Smelter Plume is a part of the Commencement Bay Nearshore Tideflats NPL site and includes large portions of Pierce, King, Kitsap, and Thurston Counties related to windblown contamination of arsenic and lead deposited from operation of the Asarco Smelter in Ruston, Washington, for a period of nearly 100 years (Ecology 2020). The area of the subject property is mapped within an area of impact from arsenic of less than 20 parts per million. Based on the mapped concentrations, this represents *de minimis* conditions at concentrations less than Model Toxics Control Act Method A cleanup levels and is not considered a REC for the subject property.

3.1.2.2 SEMS List

The EPA's Superfund Enterprise Management System (SEMS) database identifies sites that may potentially pose a threat to the environment or the health of the public.

Information contained in the EDR report indicates that the subject property is not listed as a SEMS site. Four SEMS sites were identified within 0.5 mile of the subject property:

- The Tacoma Spur site (S 24th Street and A Street) is located approximately 950 feet northwest of the subject property. This listing is related to PAH contamination in groundwater discovered during construction of Interstate 705 in 1984. This site is part of the Commencement Bay Nearshore Tideflats NPL site. Itis not considered a REC based on the distance from the subject property (located over 950 feet northwest).
- The Union Pacific Railroad Tunnel site (Jefferson Avenue and 25th Street) is located approximately 2,100 feet west of the subject property. This site was an abandoned railroad tunnel containing abandoned waste. No significant levels of contaminants were found in groundwater at this site. Based on available information and distance from the subject property, this site does not represent a REC for the subject property.
- The BNSF Railroad site is located approximately 1,100 feet northeast of the subject property. This listing is related to historical tar pits associated with a former coal gasification plant that operated from the 1920s through 1956. This site is Operable Unit 3 of the Commencement Bay Nearshore Tideflats NPL site and is not considered a REC for the subject property due to ongoing remediation and monitoring and no known impacts to the subject property.
- Supervalu Ammonia Response (590 E 19th Street) is located approximately 2,300 feet north of the subject property. This listing related to a response that occurred to an ammonia release in

2017 as is not an active threat. Based on the information, this listing is not considered a REC for the subject property.

The EPA also publishes the SEMS-ARCHIVE list, which identifies SEMS sites that have been designated "no further remedial action planned" and that have been removed from the SEMS List. Information contained in the EDR report indicates that the subject property is not listed as a SEMS-ARCHIVE site. One SEMS-ARCHIVE site is identified within 0.5 mile of the subject property:

- American Plating (2220 East D Street) is located approximately 1,050 feet north of the subject property. This site is discussed in Section 3.1.1.8 above.

3.1.2.3 CORRACTS Review

The CORRACTS List identifies hazardous waste handlers with a history of RCRA corrective action activity. This list shows which corrective action events have occurred for every hazardous waste handler that has had corrective action activity due to improper procedures or handling.

Information contained in the EDR report indicated that the subject property is not listed as a CORRACTS site. Two CORRACTS sites are listed within one mile of the subject property:

- American Plating (2220 East D Street) is located approximately 1,050 feet north of the subject property. This site is discussed in Section 3.1.1.8 above.
- The University of Washington Tacoma Branch Campus (1930 C Street) is located approximately 2,700 feet northeast of the subject property. The listing is related to petroleum hydrocarbons, PAHs, and volatile organic compounds (VOCs) in soil and groundwater below the campus. The site entered an Agreed Order with Ecology in 1997 and is undergoing remediation and monitoring. Based on the distance from the subject property (located approximately 2,700 feet northwest), this site is not considered a REC for the subject property.

3.1.2.4 RCRA Generators List

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments of 1984. The database includes selective information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA.

Very small quantity generators generate less than 100 kilograms (kg) of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators generate more than 1,000 kg of hazardous waste, or more than 1 kg of acutely hazardous waste per month. Non-generators do not currently generate hazardous waste.

Information contained in the EDR report indicates that the subject property is not listed in any RCRA generator database.

Fourteen RCRA Non-generators are listed within 0.125 mile of the subject property. Based on lack of violations or the nature of violations, these sites do not represent RECs for the subject property.

EPA also regulates the management of hazardous waste at transportation, storage, and disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a TSD site. No TSD sites are identified within 0.5 mile of the subject property.

3.1.2.5 ERNS List

The ERNS List is a national database containing information from spill reports made to federal authorities. Information contained in the EDR report indicates that no ERNS sites are listed near the subject property.

3.1.2.6 US Brownfields List

The EPA's US Brownfields List identifies brownfield properties addressed by Cooperative Agreement Recipients or by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a US Brownfields site. Two US Brownfields site is listed within 0.5 mile of the subject property:

- American Plating (2220 East D Street) is located approximately 1,050 feet north of the subject property. This site is discussed in Section 3.1.1.8 above.
- Shaub-Ellison Parcel (1902 Pacific Ave) is located approximately 2,600 feet northwest of the subject property. During development, 3,700 cubic yards of petroleum were removed from the property. Residual petroleum-contaminated soil and groundwater remain at the site, and the site is currently undergoing remediation. Based on the distance from the subject property (approximately 2,600 feet northwest) and downgradient location, this site does not represent a REC for the subject property.

3.1.3 Other Databases

3.1.3.1 EDR Proprietary Databases

EDR has conducted research on the occurrence of historical business practices that may pose a REC to properties. The database was developed from data found in historical city directories and contains information on over 100,000 former gas stations, manufactured gas plants, and dry cleaners. Because of the nature of these businesses, the sites have the potential for soil and groundwater contamination to have occurred.

EDR Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR. The listings reviewed include, but were not limited to, gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and/or service station.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are thirteen EDR Historical Auto Stations sites within 0.125 mile of the subject property. Only one of the thirteen sites is located upgradient (indicating that an on-site release impacting groundwater could have potential to impact the subject property) of the subject property:

- The Industrial Parts site (405-409 26th St E) is located 130 feet south of the subject property. The site was identified as an automotive repair shop between 1965 and 2013. No tanks or reported releases are associated with this site.

Unless otherwise noted, the mere presence of historical auto stations near a site does not, in itself, constitute a REC. The identified site does not appear to represent a REC for the subject property based on the lack of reported releases.

EDR Manufactured Gas List

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800s to 1950s to produce a gas that could be distributed and used as fuel. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils, and other compounds, are potentially hazardous to human health and the environment. The byproducts from this process were frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

One manufactured gas site is listed within one mile of the subject property:

- The Tacoma Coal Gasification site (E 22nd Street and A Street) is located approximately 1,500 feet northwest of the subject property. There is no additional information on this site. Based on the distance from the subject property and the downgradient location, this site does not represent a REC for the subject property.

EDR Historical Dry Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to, dry cleaners, cleaners, laundries, laundromats, cleaning/laundry businesses, wash and/or dry businesses.

A review of the EDR Historical Dry Cleaner list, as provided by EDR, has revealed that there are two EDR Historical Dry Cleaner sites within 0.125 mile of the subject property:

- Right Way Laundry (2330 South E Street) is located approximately 400 feet north and downgradient of the subject property. This site was identified as being a laundry in 1921. No other information is known. However, it does not appear to represent a REC for the subject property.
- Amanozio Laundry (423 Puyallup Avenue) is located approximately 500 feet north and downgradient of the subject property. This site was identified as being a laundry in 1921. No other information is known. However, it does not appear to represent a REC for the subject property.

Unless otherwise noted, the mere presence of a historical dry cleaner near a site does not, in itself, constitute a REC. The identified sites do not appear to represent a REC for the subject property based on the lack of reported releases and the distance and gradient from the subject property.

3.1.4 Orphan Site List

Orphan sites are those for which mapping information is not detailed enough to plot the location of the site, or for which there is no known responsible party, or the responsible party is unwilling or unable to pay for cleanup. Based on a review of the information for the orphan sites, none appears to represent a potential REC for the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-13 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface,

and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The target property and adjacent sites were reviewed in an effort to determine whether vapor migration has, or has the potential to have, occurred at the site from adjacent properties. Based on the information reviewed, the subject property is not identified as a potential vapor intrusion site. Groundwater and soil contamination on site is limited primarily to diesel and oil-range hydrocarbons, metals, and PAHs, which do not typically cause vapor intrusion issues. Limited detected concentrations of VOCs in groundwater and naphthalene in soil are at levels that do not appear to warrant a concern for vapor intrusion.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area to help identify the likelihood that past uses have led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include the Certified Sanborn Maps and the historical aerial photos.

3.2.1 Certified Sanborn Maps

A copy of the Certified Sanborn Map Report is included in Appendix C. Maps were available for 1886, 1912, 1950, and 1963. Observations from the Sanborn Maps are listed below.

1886 The subject property is partially developed with a lodge hall and a number of residences. Surrounding properties are developed with stores and residences. Railroad tracks have not yet been constructed through the vicinity.

1912 The subject property is developed with a freight house on the western portion of the subject property and an ice factory/machine shop/creamery on the eastern portion. Railroad tracks have been constructed along the southern edge of the freight house, extending east and west. Residences and stores surround the subject property on adjacent streets. The Tacoma Biscuit and Candy factory is adjacent to the north of the subject property across E 25th Street.

1950 The subject property appears to be developed in a similar configuration. Adjacent surrounding properties include residences, warehouses, factories, and an icehouse.

1963 The subject property appears to be developed in a similar configuration as in 1950, with the addition to the structure between East F Street and East G Street. Adjacent properties are developed similar to 1950, with the addition of a junkyard to the north across E 25th Street and a motel to the south across the railroad tracks.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs of the subject property area examined for the years 1941, 1957, 1968, 1980, 1990, 2006, 2013 and 2017. Copies of the aerial photographs are included in Appendix D. Observations are discussed below.

1941 The subject property appears developed with the current freight house and warehouses. The far eastern portion of the subject property appears undeveloped. The railway line is apparent in the aerial photo just to the south of the subject property. The vicinity of the subject property appears developed though the quality of the photo prevents distinguishing between land uses.

1957 The subject property appears as it did in the prior photo with an addition to the existing structure between East F Street and East G Street. The vicinity of the subject property is fully developed with apparent warehouses and industrial properties.

1968 The subject property and vicinity properties appear much as they did in the 1957 photo.

1980 The subject property and vicinity properties appear much as they did in the 1968 photo.

1990 The subject property appears much as it did in the 1980 photo. The property immediately to the north, between East E Street and East F Street, appears to have been cleared. The Tacoma Dome has been constructed three blocks south of the subject property.

2006 The subject property appears much as it did in the 1990 photo. The property to the north, which had been cleared in the 1990 photo, appears to have been developed into parking garages. Much of the rest of the vicinity of the subject property appears similar to the 1990 photo.

2013-2017 The subject property and vicinity appear much as they did in the 2006 photo.

Based on the historical document review, the subject property first appeared developed with the current structure in the 1912 Sanborn map. Prior to the development, the subject property was sparsely developed with residences (1886). The subject property remained relatively unchanged until the 1957 aerial photo, where an addition to the structure on the subject property becomes apparent between East F Street and East G Street. There are no significant changes to the subject property between 1957 and present. No evidence of RECs was identified on the subject property or in the vicinity during the historical document review.

3.2.3 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.3.1 City of Tacoma

A review of permits for environmental significance (i.e., septic tank, stormwater, dry wells, and/or USTs or aboveground storage tanks [ASTs]) was completed. No permits of environmental significance were identified on the City of Tacoma's Permit Search Tool (City of Tacoma 2020a).

3.2.3.2 Pierce County

Based on information from the Pierce County Property Assessor-Treasurer Information Portal, the subject property is located on Tax Lots 2075220021, 2075240011, and 2075240013, and is approximately 1.6 acres. The subject property is currently owned by Time In Space LLC.

Pierce County records indicate that one structure constructed in 1956 is located on the subject property. This likely refers to the eastern addition to the original 1909 structure.

3.2.4 Additional Environmental Information

The following subsections provide a summary of additional environmental information obtained for the site.

3.2.4.1 Asbestos

The manufacture of most asbestos-containing materials was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the structure (1956), there is potential for asbestos-containing materials to have been used in the construction of the buildings. An HBMS has not been conducted on the subject property.

3.2.4.2 Lead-Based Paint

Before 1977, paint commonly contained lead, which is considered to cause human health problems if ingested. Based on the age of the structure (constructed in 1956), there is a potential for LBP to have been used in the construction of the building. An HBMS has not been conducted on the subject property.

3.2.4.3 Polychlorinated Biphenyls

Transformers can potentially contain PCBs. There are no transformers located on the subject property. Based on the age of the structure (constructed in 1956), there is potential for PCBs to have been used in the construction of the building (primarily used in lighting and electrical equipment). However, Parametrix did not inspect the building interior for this assessment and an HBMS has not been conducted on the subject property.

3.2.4.4 Radon

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

Pierce County ZIP code 98421 is located in Federal EPA Radon Zone 3. The Zone 3 indoor average radon level is less than 2 pCi/L (pico Curies per Liter). Based on this limited information, radon likely does not represent an environmental concern at the property. In addition, based on lack of a basement and the occupational nature of the site (limited working hours), radon is not expected to be a potential REC for the subject property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-13, inquiries and review of previous investigations for the subject property and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties and fill in data gaps where applicable. Previous investigations and file reviews are summarized below.

4.1 Previous Investigations

Based on the subject property's listing in Ecology's CSCSL and CSCSL NFA databases, Parametrix requested available site records from the agency. The subject property is listed in Ecology's records under two different cleanup site names: Freighthouse Square (CS 719) and Freighthouse Square Amtrack Relocation (CS144160). Contamination at this site likely originated from storage of diesel and oil at the Olympic Ice and Machine Company in the early 20th century. The Freighthouse Square Amtrak Relocation site (CS 144160) was designated as a cleanup site in 2017 as a result of contamination found during an investigation for the construction of a new Tacoma Amtrak Cascades Station (TACS) by the Washington Department of Transportation.

The east end of Freighthouse Square was destroyed by a fire in 1992. Investigations for contamination were initiated after excavation at the site in 1993 found petroleum contaminated soils. Approximately 12 tons of contaminated soil were excavated and disposed of during construction. Post excavation samples were collected, and diesel concentrations were below cleanup levels. Sample results for metals were also below cleanup levels. Groundwater grab samples collected from the open excavation in 1993 exceeded cleanup levels for oil-range hydrocarbons, cadmium, chromium, and lead. Due to the heavy-oil nature of the petroleum contamination, the limited metals concentrations, and no local beneficial use of groundwater, it was determined that the groundwater contamination did not pose a significant threat to human health or the environment and the site was deemed eligible for an NFA determination with the implementation of institutional controls to limit groundwater and property use. A periodic review is completed on the site every 5 years in accordance with the requirements of the Model Toxics Control Act, Chapter 173-340 WAC (Ecology 2017). The Restrictive Covenant for the property (recorded in July 2003) imposes the following limitations:

- No groundwater may be taken for any use from the property.
- Any activity that may interfere with the integrity of the remedial action and continued protection of human health and the environment is prohibited.
- Any activity that may result in the release or exposure to the environment of groundwater containing a hazardous substance that remains on the property is prohibited.
- The owner must give 30 days' advanced notice to Ecology of the owner's intent to convey any interest in the property.
- The owner must restrict leases to uses and activities consistent with the restrictive covenant.
- The owner shall allow authorized representatives of Ecology the right to enter the property for the purposes of evaluating the remedial action.
- The owner of the property reserves the right to record an instrument that provides that this restrictive covenant shall no longer limit use of the property if approved by Ecology.

A Phase II ESA was conducted for the new TACS in late 2014 and early 2015 and is included in Appendix F, Supporting Materials. Eighty-eight soil samples and 11 groundwater samples were collected from 28 borings around the perimeter of the subject property. Cleanup levels were exceeded for cPAHs and oil-range hydrocarbons in soil. Diesel and arsenic exceeded cleanup levels in groundwater (Shannon & Wilson 2015).

For the portion of the site occupied by subject property parcels, remedial actions recommended by Shannon & Wilson included the preparation of a Contaminated Media Management Plan (CMMP) and targeted excavation around boring locations with concentrations of cPAHs and oil-range hydrocarbons exceeding cleanup standards (Shannon & Wilson 2015).

4.2 Adjacent Properties File Review

Several nearby properties were listed on environmental databases, as described in Section 3. In general, sufficient site-specific information was available through review of the EDR report, as well as online Ecology files to develop an opinion on the potential for these properties to have affected the subject property.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on November 3, 2020. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. Photographs of the subject property taken during the site examination are included in Appendix E.

5.1 Subject Property

The subject property is developed with a large former freight house and warehouse currently in use housing a number of commercial businesses and a rail station. Businesses include gift shops and restaurants. The northern edge of the subject property is fronted by a wide sidewalk along E 25th Street and the southern edge borders the active railroad tracks. Two transformers are located along the edge of the subject property, one along East G Street and one along E 25th Street.

No evidence of ASTs or other indications of environmental significance were observed on the exterior portions of the property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed. In general, no RECs or other adverse environmental conditions were identified associated with the subject property.

5.2 Adjacent Properties

The vicinity of the subject property is developed primarily with commercial and industrial buildings. Adjacent properties were examined from public areas for the presence of environmental conditions that have the potential to impact the subject property.

The subject property is bounded by E 25th Street to the north (including a Sound Transit streetcar rail and stop) with a parking garage to the north. BNSF tracks lie to the south, with an empty lot and a restaurant on the other side. Parking lots lie across East D Street and East G Street to the west and east, respectively. No evidence of significant staining or stressed vegetation was noted on the ground surface on assessable properties adjacent to the site. No evidence of the storage of chemical or hazardous materials identified on visible areas of adjacent properties.

6. INTERVIEWS

An interview was not conducted with a property representative to identify any potential environmental conditions or to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-13.

A user questionnaire was submitted to Sound Transit to assist in identifying potential RECs affecting the site and identification of background information on the subject property. No RECs were identified through the review of the user questionnaire. A copy of the user questionnaire completed by Sound Transit is attached in Appendix A.

Parametrix completed an interview with Rob Olsen, Environmental Health Specialist of the Tacoma-Pierce County Health Department Environmental Health – Contaminated Properties division, on February 4, 2021 (TPCHD 2021). TPCHD had no records that provided evidence of additional RECs for the subject property.

7. CONCLUSIONS

Parametrix conducted a Phase I ESA in conformance with the scope and limitations of American Society for Testing and Materials (ASTM) Standard Practice E 1527-13 (2013) on the subject property identified as TD 4461, TD 4476, and TD 4505. Any exceptions to, or deletions from, the Standard Practice are described in Section 1.3 of this report.

The subject property is located on Pierce County Tax Lots 2075240013, 2075240011, and 2075220021 and is currently occupied by a number of commercial businesses and a passenger rail station. The subject property encompasses an area of approximately 1.6 acres and is zoned for mixed use. The subject property consists of a 54,916-square-foot building.

The first known development on the subject property was in the 1880s with isolated residences. By 1912, the freight house that still stands on the property was constructed. The subject property remained the same until a structure was added to the east end in 1957. No significant changes were made to the subject property between 1957 and the present. However, a fire in 1992 destroyed the eastern portion of the building, which was reconstructed. Surrounding land use has remained commercial and industrial. The rail station construction on the west end occurred in 2016.

No evidence of significant use or storage of hazardous substances and/or petroleum products was noted on or near the subject property during site reconnaissance. No evidence of distressed vegetation, spills or releases, dry wells, or other indications of environmental concern was identified during the site reconnaissance.

This assessment has revealed no evidence of RECs in connection with the subject property. except for the following:

Recognized Environmental Conditions

The subject property is listed in both the Confirmed and Suspected Cleanup Site List (CSCSL) and CSCSL No Further Action (NFA) database. Contamination, likely originating from the former Olympic Ice and Machine Company, resulted in soil and groundwater impacts at the subject property. Diesel and oil-range hydrocarbons, polycyclic aromatic hydrocarbons (PAHs), and metals have been detected in soil and groundwater. Cleanup levels were exceeded for carcinogenic PAHs (cPAHs) and oil-range hydrocarbons in soil. Diesel and arsenic exceeded cleanup levels in groundwater. The site received a conditional NFA in 2003 with the implementation of a restrictive covenant that dictates groundwater and land use at the site. The presence of residual soil and groundwater contamination at the subject property represents a CREC.

Data Gaps

An on-site reconnaissance and interview were not able to be conducted with a property representative to identify any potential environmental conditions and to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-13. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

PROPERTY HISTORY

Issued By:

CHICAGO TITLE INSURANCE COMPANY

Guarantee Number:

210605-SC [ROW TD4461, TD4476. TD4506]

CHICAGO TITLE INSURANCE COMPANY
a Florida corporation, herein called the Company

GUARANTEES

the Assured named in Schedule A, against actual loss not exceeding the liability stated in Schedule A which the Assured shall sustain by reason of any incorrectness in the assurances set forth in Schedule A.

LIABILITY EXCLUSIONS AND LIMITATIONS

1. No guarantee is given nor liability assumed with respect to the identity of any party named or referred to in Schedule A or with respect to the validity, legal effect, or priority of any matter shown therein.
2. The Company's liability hereunder shall be limited to the amount of actual loss sustained by the Assured because of reliance upon the assurance herein set forth, but in no event shall the Company's liability exceed the liability amount set forth above.

PROPERTY HISTORY GUARANTEE

Total Liability Limited to	Fee	Tax
$50,000.00	$350.00	$35.35

Date of Report: March 3, 2021 at 08:00 AM

A. Assured: Central Puget Sound Regional Transit Authority, a regional transit authority

B. The land described in this Guarantee is described as follows:

SEE EXHIBIT "A" ATTACHED HERETO AND MADE A PART HEREOF

C. At your request, Chicago Title Insurance Company, a Florida corporation has searched the public records of Pierce, Washington, which by law impart constructive notice, for the documents shown below (hereinafter called "the Instruments"):

Deeds, Contracts, Leases

D. At your request, the period of time searched is as follows:

Beginning date: March 3, 1971 at 08:00 AM
Ending date: March 3, 2021 at 08:00 AM

E. The following matters are excluded from the search provided by this guarantee:

1. Unpatented mining claims, and patents
2. Water rights, or claims thereof
3. Instruments, proceedings or other matters which do not specifically describe said land.

This Guarantee is restricted to the use of the Assured. This Guarantee is not a Commitment nor an obligation by the Company to issue any Policy or Policies of Title Insurance insuring said land, and is not to be used as a basis for closing any transaction affecting title to said property.

F. The Instruments as defined in Paragraph C recorded during the period of time searched are:

GENERAL EXCEPTIONS

H. Reservations and exceptions in United States Patents or in Acts authorizing the issuance thereof.

SPECIAL EXCEPTIONS

EXCEPTIONS - PARCEL A:

(continued)

1. Real Estate Contract

Grantor: Richard B. Ogilvie, not as an individual but solely as Trustee of the property of Chicago, Milwaukee, St. Paul and Pacific Railroad Company, Debtor
Grantee: DOMO, a Limited Partnership
Recorded: December 17, 1981
Recording No.: 8112170249

2. Quit Claim Deed:

Grantor: Irene J. Alskog, wife of J. Elmer Alskog
Grantee: J. Elmer Alskog, husband of Irene J. Alskog
Recorded: November 19, 1982
Recording No.: 8211190308

3. Quit Claim Deed:

Grantor: Richard B. Ogilvie, not as an individual but solely as Trustee of the property of Chicago, Milwaukee, St. Paul and Pacific Railroad Company, Debtor
Grantee: DOMO, a Limited Partnership

EXHIBIT "A"

Legal Description

PARCEL A: 207522-0021 and 207524-0011:

The Northerly 77 feet of Blocks 7522 and 7524, Tacoma Land Company's First Addition to Tacoma, according to plat filed for record July 7, 1884, in the office of the County Auditor, in Pierce County,
Washington.

Except the East 135 feet of said Block 7524.

Together with that portion of East "E" Street adjoining said Northerly 77 feet of Blocks 7522 and 7524, vacated by City of Tacoma Ordinance Nos. 3127 and 23949.

Except that portion appropriated by the State of Washington in Pierce County Superior Court Cause No. 16-2-05479-5.

PARCEL B: 207524-0013:

The Northerly 77 feet of the Easterly 135 feet of Block 7524, and the Northerly 77 feet of Block 7526, Tacoma Land Company's First Addition to Tacoma, according to plat filed for record July 7, 1884, in the office of the County Auditor, in Pierce County, Washington.

Together with that portion of East "F" Street, vacated by City of Tacoma Ordinance Nos. 3128 and 23949, adjoining the Northerly 77 feet of said Blocks 7524 and 7526.

Except from said Block 7526 that portion appropriated by the City of Tacoma for the construction and maintenance of a public street, by Decree entered September 12, 1928 in Pierce County Superior Court
Cause No. 61287, and being described as follows:

Beginning at the Southeast corner of said Block 7526;
Thence Northerly along the East line of said block, a distance of 119.73 feet;
Thence in a Southwesterly direction on a curve to the right having a radius of 538 feet and concentric with a curve having a radius of 573 feet, whose tangent at a point on the center line of East "G" Street, 36.80 feet South of the center line of East 25th Street making an angle of 14 degrees 22' to the Southwest with the said center line of East "G" Street, a distance of 130.04 feet to a point of compound curve;
thence continuing Southwesterly on a curve to the right having a radius of 283 feet, a distance of 1.32 feet to a point on the South line of said Block 7526, said point being 2.84 feet West of the Southeast corner of Lot 10, in said Block 7526;
thence Easterly along the South line of said Block, a distance of 52.84 feet to the place of beginning.

Except all track material, including, but not limited to rails, fastenings, angle bars, tie plates, ties and other improvements, as excepted in deed from Richard B. Ogilvie, as Trustee of the Property of Chicago, Milwaukee, St. Paul and Pacific Railroad Company and recorded under Recording No. 8109020105.

Title Guarantees supporting documents are available upon request.

User representative: ***Sound Transit – Ross Stainsby***

Date: ***February 2021***

Project Name: ***Tacoma Dome Link Extension***

Property Name and TD #: ***Freighthouse Square, TD 4461, 4476, 4506***

Project Number: ***AE 0030-17***

ASTM 1527-13 USER QUESTIONS

ASTM 1527-13 includes a user questionnaire that must be completed by the user in order to qualify for Landowner Liability Protections (LLPs) under CERCLA. The following questions are to be completed by the user or representatives of the user.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?
   _No_____
2. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?
   __No_____
3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties?
   _No_____
4. For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?
   _No_____
5. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? _I am not aware of the purchase price_____
6. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases?
   __No_____

   For example, as user,

   (a) do you know the past uses of the property?
   _No_____
   (b) do you know of specific chemicals that are present or once were present at the property?
   _No_____
   (c) do you know of spills or other chemical releases that have taken place at the property?
   _No_____
   (d) do you know of any environmental cleanups that have taken place at the property?
   _No_____

7. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination on the property?
   ___No_____

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

EXECUTIVE SUMMARY

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2020 has revealed that there are 4 SEMS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/15/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-SQG site within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

State- and tribal - equivalent NPL

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 02/26/2020 has revealed that there are 38 WA HSL sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 07/13/2020 has revealed that there are 89 WA CSCSL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal landfill and/or solid waste disposal site lists

WA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Ecology's Solid Waste Facilities Handbook.

A review of the WA SWF/LF list, as provided by EDR, has revealed that there are 5 WA SWF/LF sites within approximately 0.5 miles of the target property.

State and tribal leaking storage tank lists

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, has revealed that there are 32 WA LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 05/12/2020 has revealed that there are 19 WA UST sites within approximately 0.25 miles of the target property.

WA PTAP: A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

A review of the WA PTAP list, as provided by EDR, and dated 05/12/2020 has revealed that there is 1 WA PTAP site within approximately 0.5 miles of the target property.

State and tribal Brownfields sites

WA BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

A review of the WA BROWNFIELDS list, as provided by EDR, and dated 07/13/2020 has revealed that there are 2 WA BROWNFIELDS sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 06/01/2020 has revealed that there

are 2 US BROWNFIELDS sites within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 07/13/2020 has revealed that there are 26 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

WA AQUEOUS FOAM: Aqueous film-forming foam-laced water running off from fuel spills, firefighting events and routine training sessions has put those chemicals in ground water, surface water, sediments, biota, and other natural resources of the state.

A review of the WA AQUEOUS FOAM list, as provided by EDR, and dated 07/06/2020 has revealed that there is 1 WA AQUEOUS FOAM site within approximately 0.5 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 23 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants

(manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

TACOMA COAL GASIFICA	E 22ND AND A STS	WNW 1/4 - 1/2 (0.318 mi.)	AH150	755

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 14 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical

Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 15 records.

Site Name	Database(s)
FREIGHTHOUSE SQUARE	WA RGA HWS
SOUTH TACOMA CHANNEL SEEP,	SEMS
LAKES DRYWALL DUMP	WA SWF/LF
OCCIDENTAL CHEMICAL-SITE II	WA SWF/LF
O'CONNER DEMOLITION FILL	WA SWF/LF
FERGUSON-MATHIAS ROAD DUMP	WA SWF/LF
GRICE DUMP	WA SWF/LF
US OIL/HYUNDAI TERMINAL	WA ICR
NORTHWEST TRANSMISSION SERVICE	WA ICR
BIG BROTHERS & BIG SISTERS BUILDIN	WA ICR
PSE TACOMA HISTORICAL COAL GAS	EDR MGP
NILSEN PLAT TOWNHOMES	WA VCP
PORTAC INC TACOMA	WA VCP
TPU PASSMORE PROPERTY	WA VCP
BAY TERRACE AKA HILLSIDE TERRACE	WA VCP

OVERVIEW MAP - 6217999.3S

- Target Property
- Sites at elevations higher than or equal to the target property
- Sites at elevations lower than the target property
- Manufactured Gas Plants
- National Priority List Sites
- Dept. Defense Sites
- Indian Reservations BIA
- Power transmission lines
- Special Flood Hazard Area (1%)
- 0.2% Annual Chance Flood Hazard
- National Wetland Inventory
- State Wetlands

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

SME CORP (Continued) **1000659001**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
